

Syntax and Prosody in the Human Brain

Angela D. Friederici

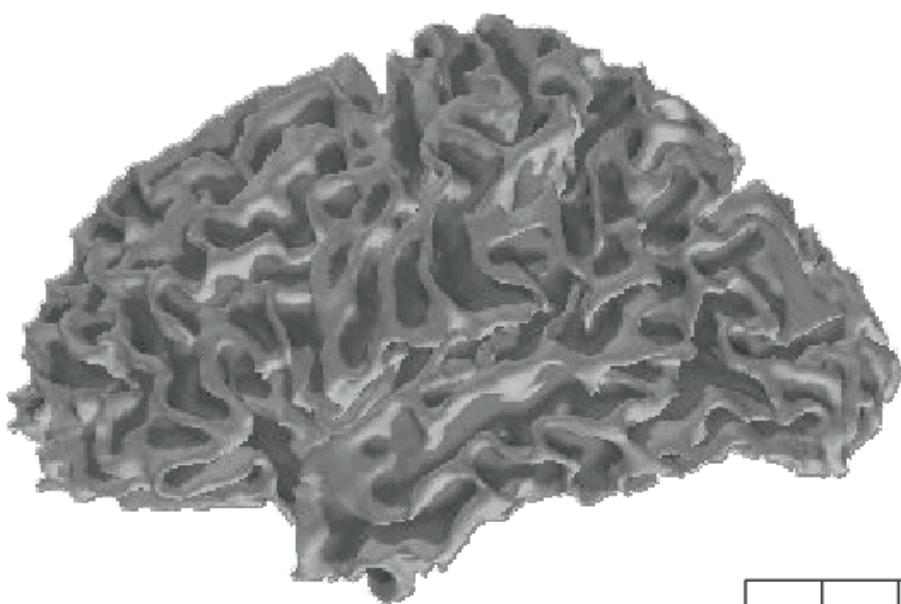

Max Planck Institute
for Human Cognitive and Brain Sciences
Leipzig, Germany

Language processing on-line

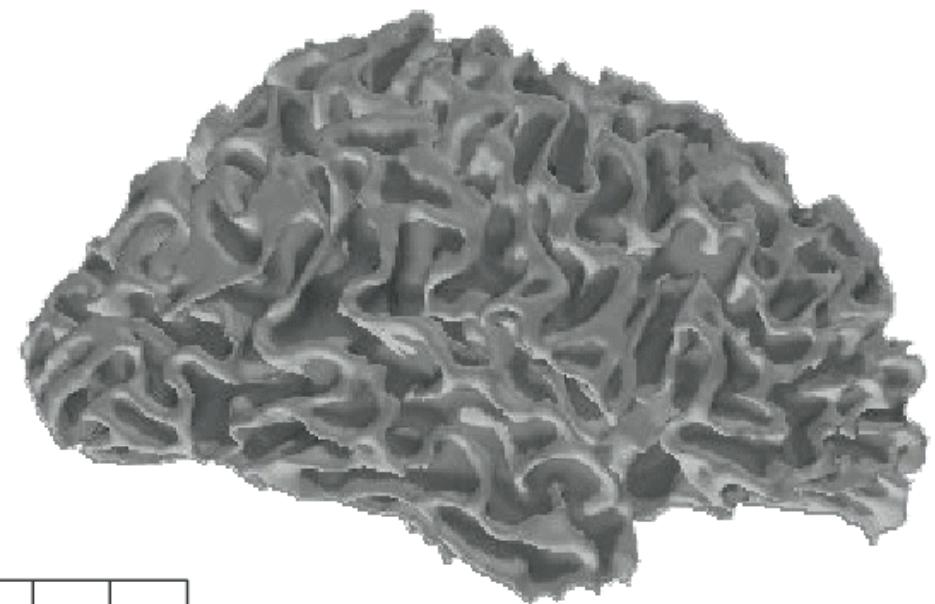

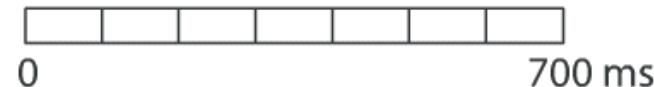

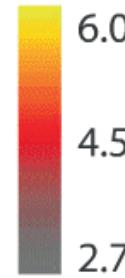

"Maria weiß, dass der Bauer beim Acker rastet."

"Mary knows, that the farmer rests close to the field."

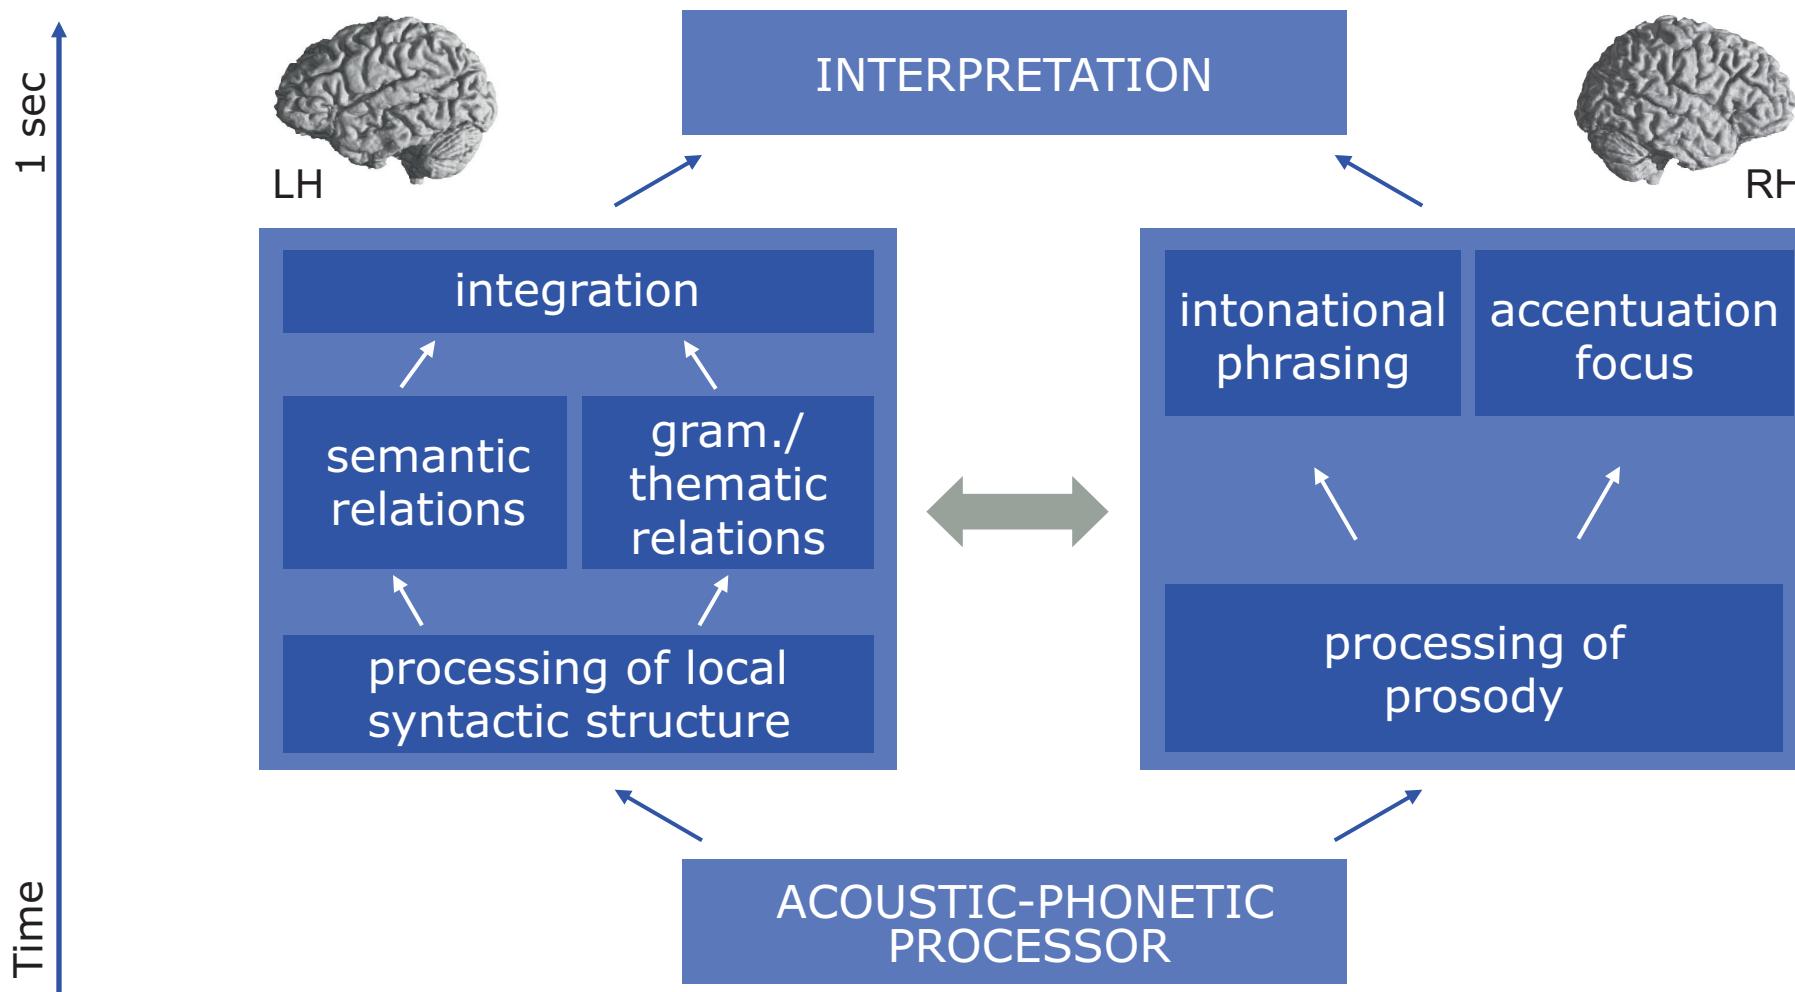

left hemisphere

right hemisphere

Model of auditory language processing

Source: Friederici & Alter, *Brain and Language*, 2004

Neuroscience of language

Which brain areas support language processing

- acoustic,
- prosodic,
- syntactic
- and semantic processes?

Neuroscience of language

Which brain areas support language processing

- acoustic,
- prosodic,
- syntactic
- and semantic processes?

Teasing the brain

There are in principle three possibilities to investigate specific subprocesses:

1. Introduction of violation of a specific information type (e.g. syntax and prosodic violation)
2. Variation of the amount of a specific information type (e.g. syntactic complexity)
3. Systematic variation of the presence/absence of a specific information type (e.g. syntax, prosody)

Stimuli: Violation of information type

correct

Das Baby wurde gefüttert.

The baby was fed.

semantically incorrect

Das Lineal wurde gefüttert.

The ruler was fed.

syntactically incorrect

Die Gans wurde im gefüttert.

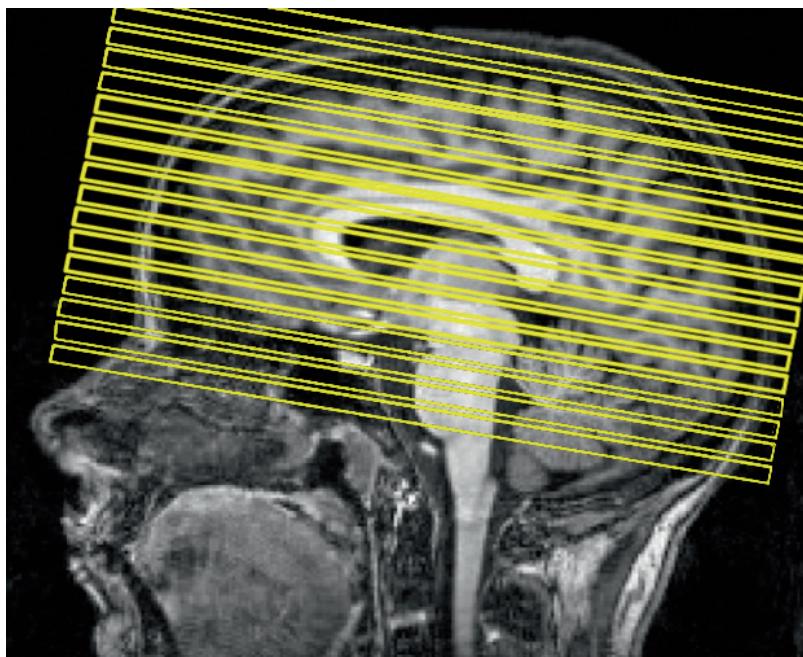

The goose was in the fed.

filler item correct

Die Kuh wurde im Stall gefüttert.

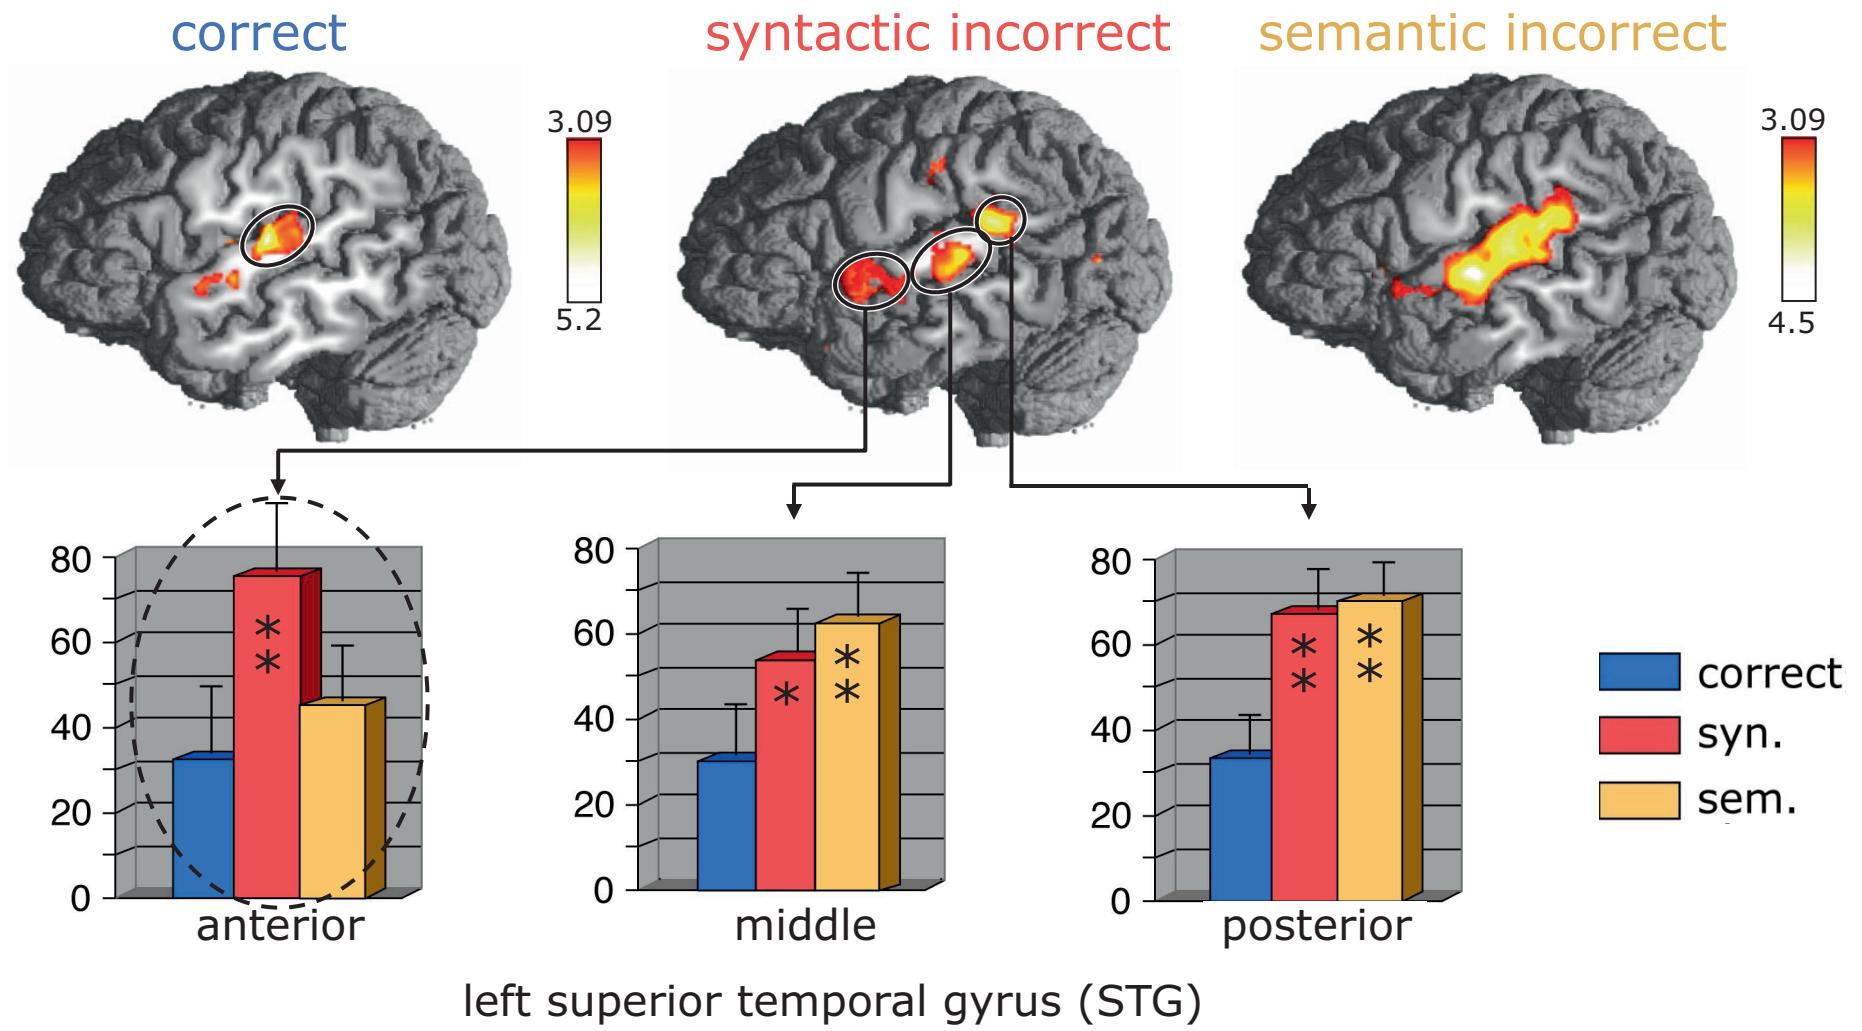

The cow was in the barn fed.

fMRI method

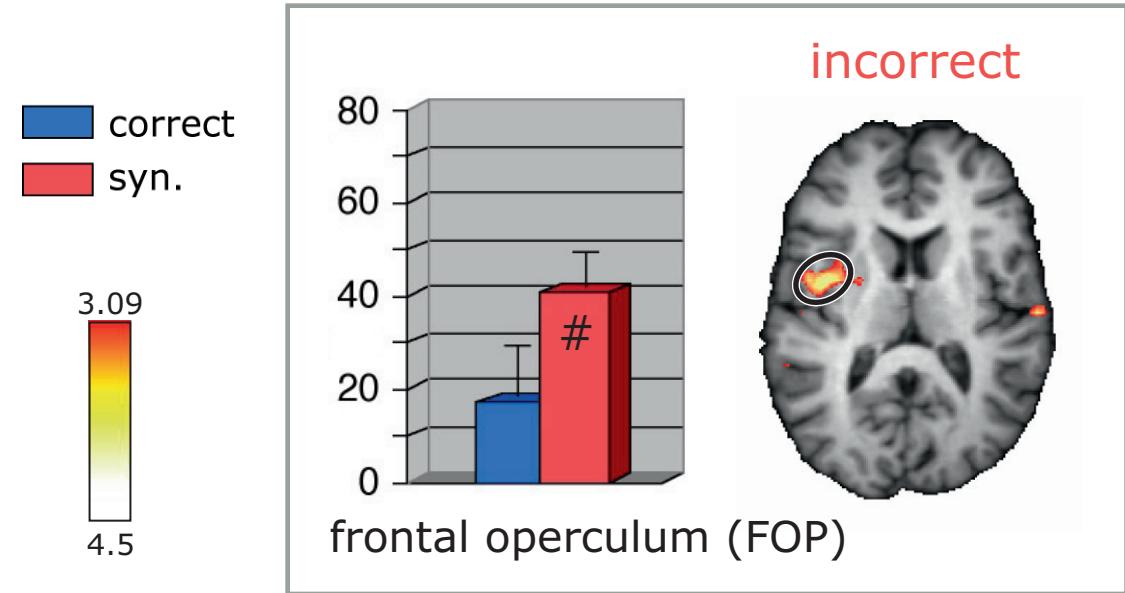

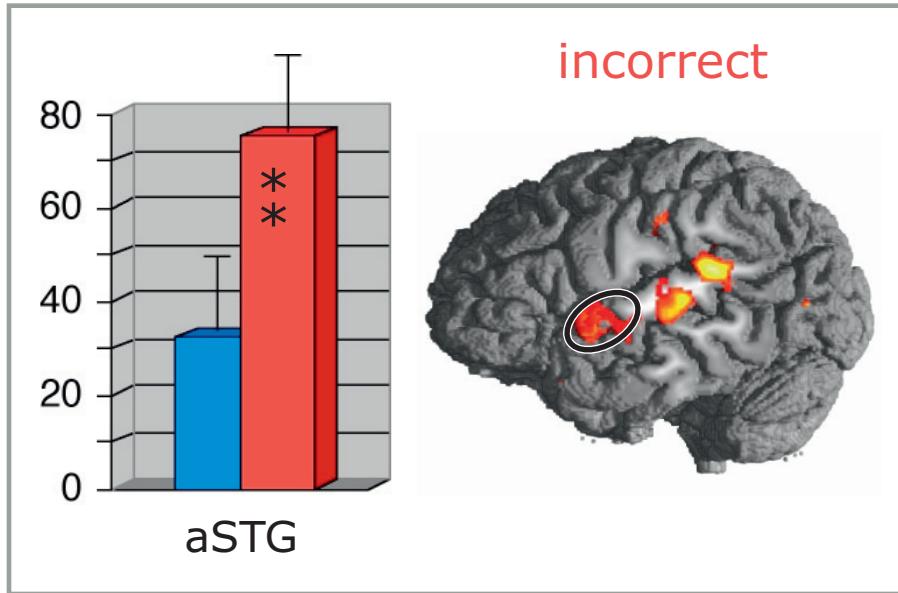

- **MRT:** 3 T Bruker Medspec 30/100 / 3 T Siemens Trio
Anatom. contrasts: T_1 -weighted 3D MDEFT sequence (128 sagittal slices)
Functional contrasts: T_2^* -weighted EPI sequence; TR = 2 s; TE = 40 ms
- **Slices:** horizontal slices parallel to the AC-PC line covering the perisylvian cortex; thickness = 4 mm; skip = 2 mm; 3 mm² *in-plane* and 7 mm *through-plane* resolution.

fMRI evidence

Source: Friederici, Rüschemeyer, Hahne & Fiebach, Cerebral Cortex, 2002

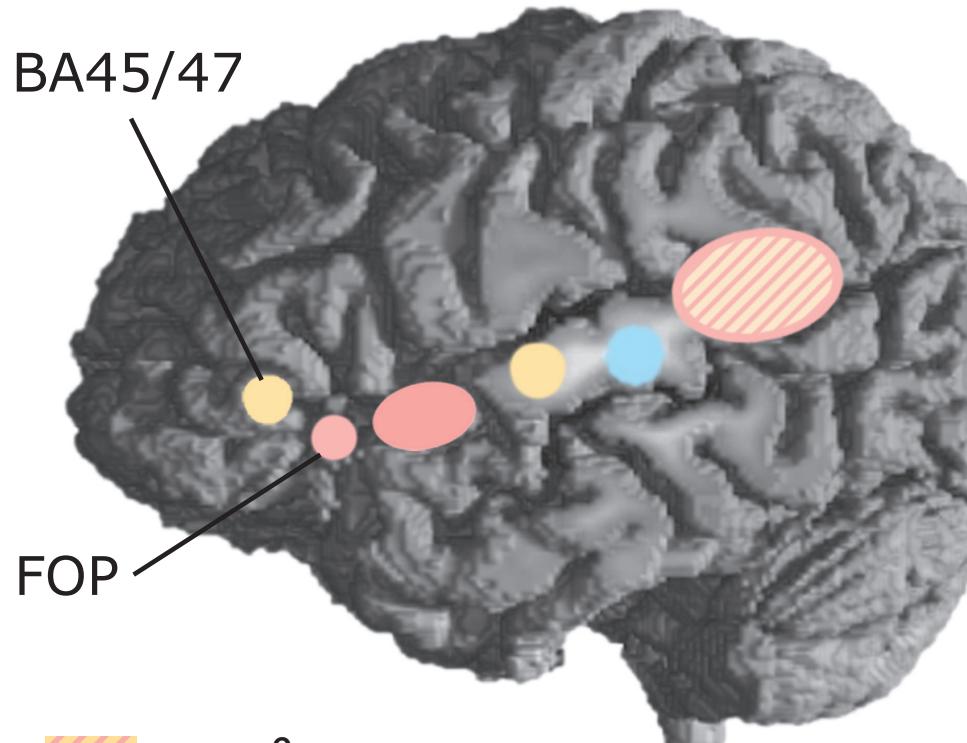

Syntactic processes: Violation

- aSTG > : Specific for syntactic violation
- FOP >
- pSTG: Less specific for semantic & syntactic violation

Source: Friederici, Rüschemeyer, Hahne & Fiebach, Cerebral Cortex, 2002

Neurotopography of syntactic and semantic processes

sem. & syn.

semantic

syntactic

auditory

left
hemisphere

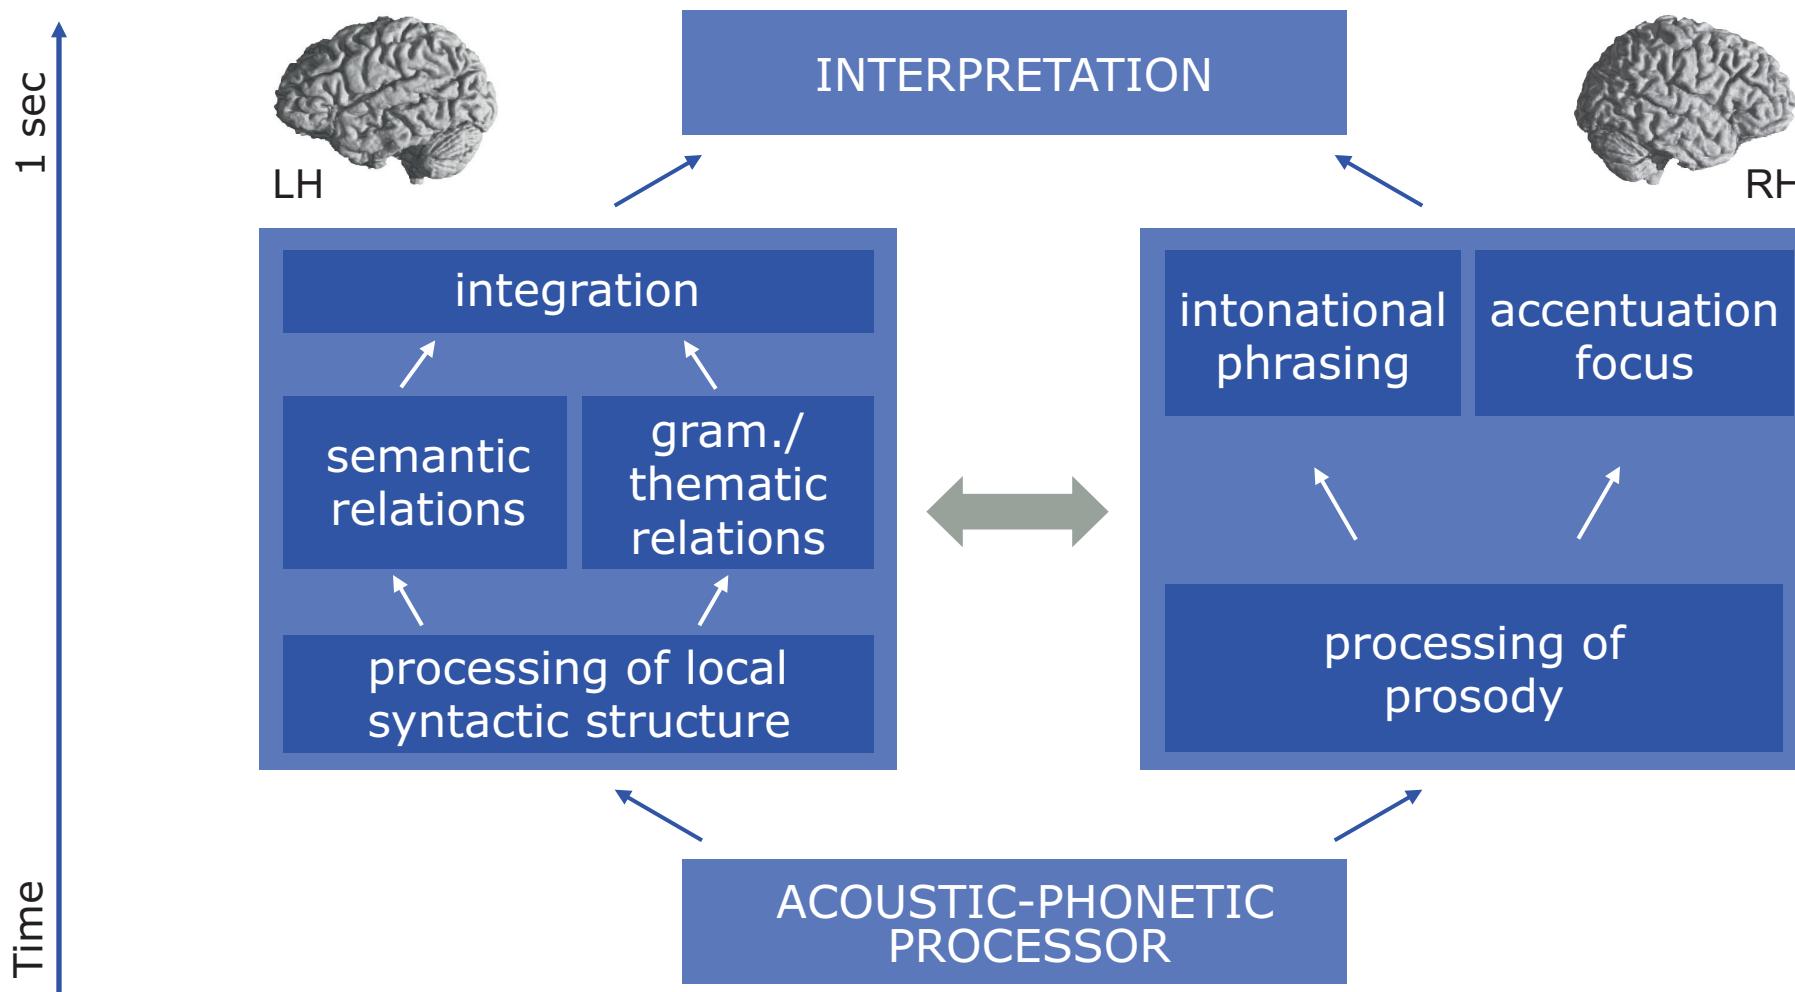

Semantic processes

- middle and posterior portion of the left superior temporal gyrus
- BA45/47 in the left inferior frontal gyrus

Syntactic processes

- anterior portion of the left superior temporal gyrus
- frontal operculum (FOP) in the left inferior frontal gyrus

Model of auditory language processing

Source: Friederici & Alter, *Brain and Language*, 2004

Which brain areas support early structure building process?

Hypothesis:

- early process:
- frontal operculum in the IFG*
 - anterior portion of the STG*
- late process:
- posterior portion of the STG

* were used as priors for MEG localization

MEG evidence

Stimuli

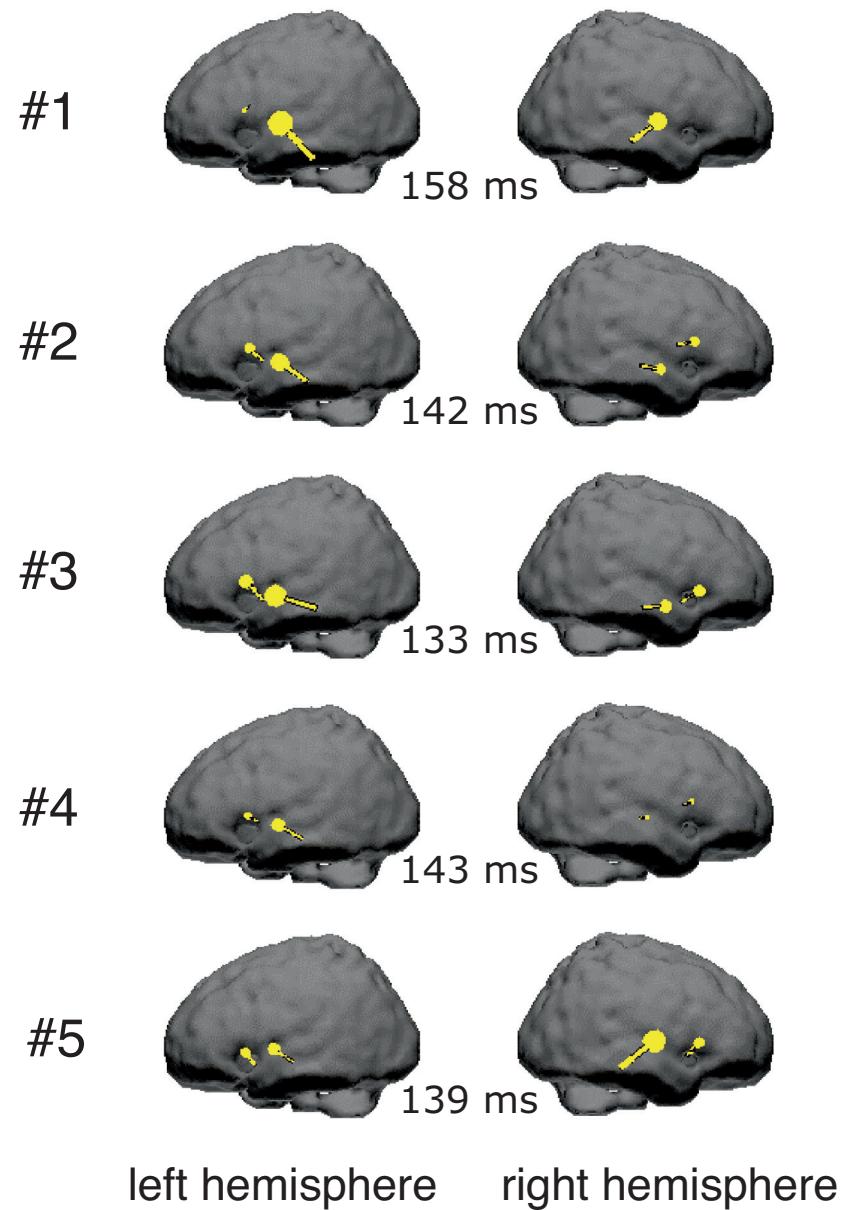

correct

Das Baby wurde gefüttert.
The baby was fed.

syntactically incorrect

Die Gans wurde im gefüttert.
The goose was in the fed.

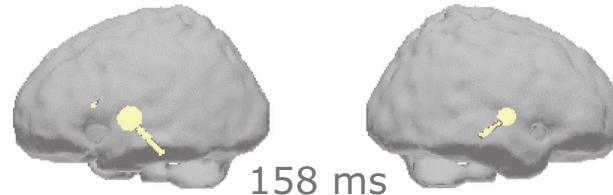

Localization of the ELAN effect

Localization of the ELAN effect

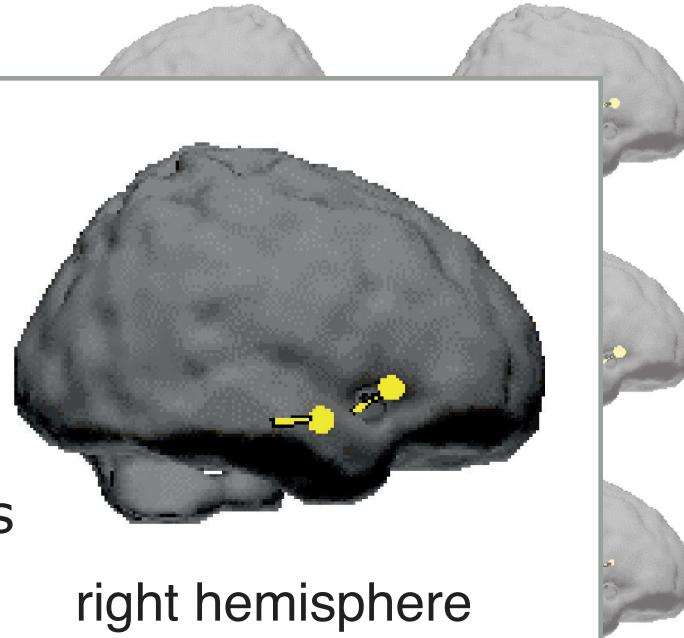

#1

#3

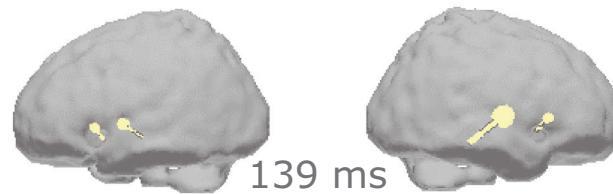

133 ms

right hemisphere

#5

139 ms

left hemisphere

right hemisphere

Source: Friederici et al., *Human Brain Mapping*, 2000

Conclusion

The early left anterior negativity (ELAN) is generated in the anterior temporal and in the inferior frontal cortex.

Is the ELAN a syntax effect (syntactic incorrectness) or due to prosodic incongruity?

ELAN: Syntax vs Prosody

Syntax (phrase structure violation) & prosody (change in F0)

Sentence, e.g.:

■ Die Küche wurde geputzt.

The kitchen was cleaned.

Syntax

+

Prosody

+

■ Das Fenster wurde im geputzt.

The window was in-the cleaned.

-

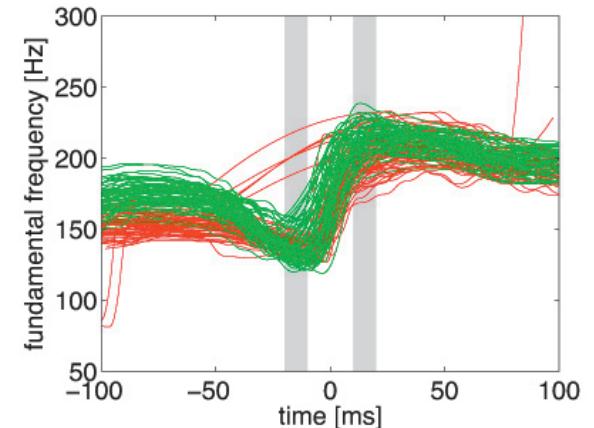

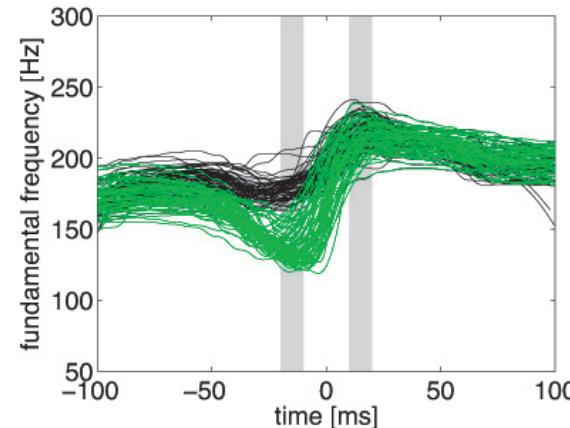

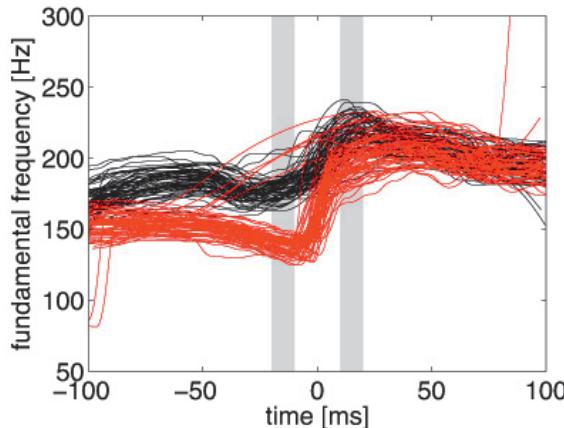

~

■ Der Boden wurde X geputzt.

The floor was X cleaned.

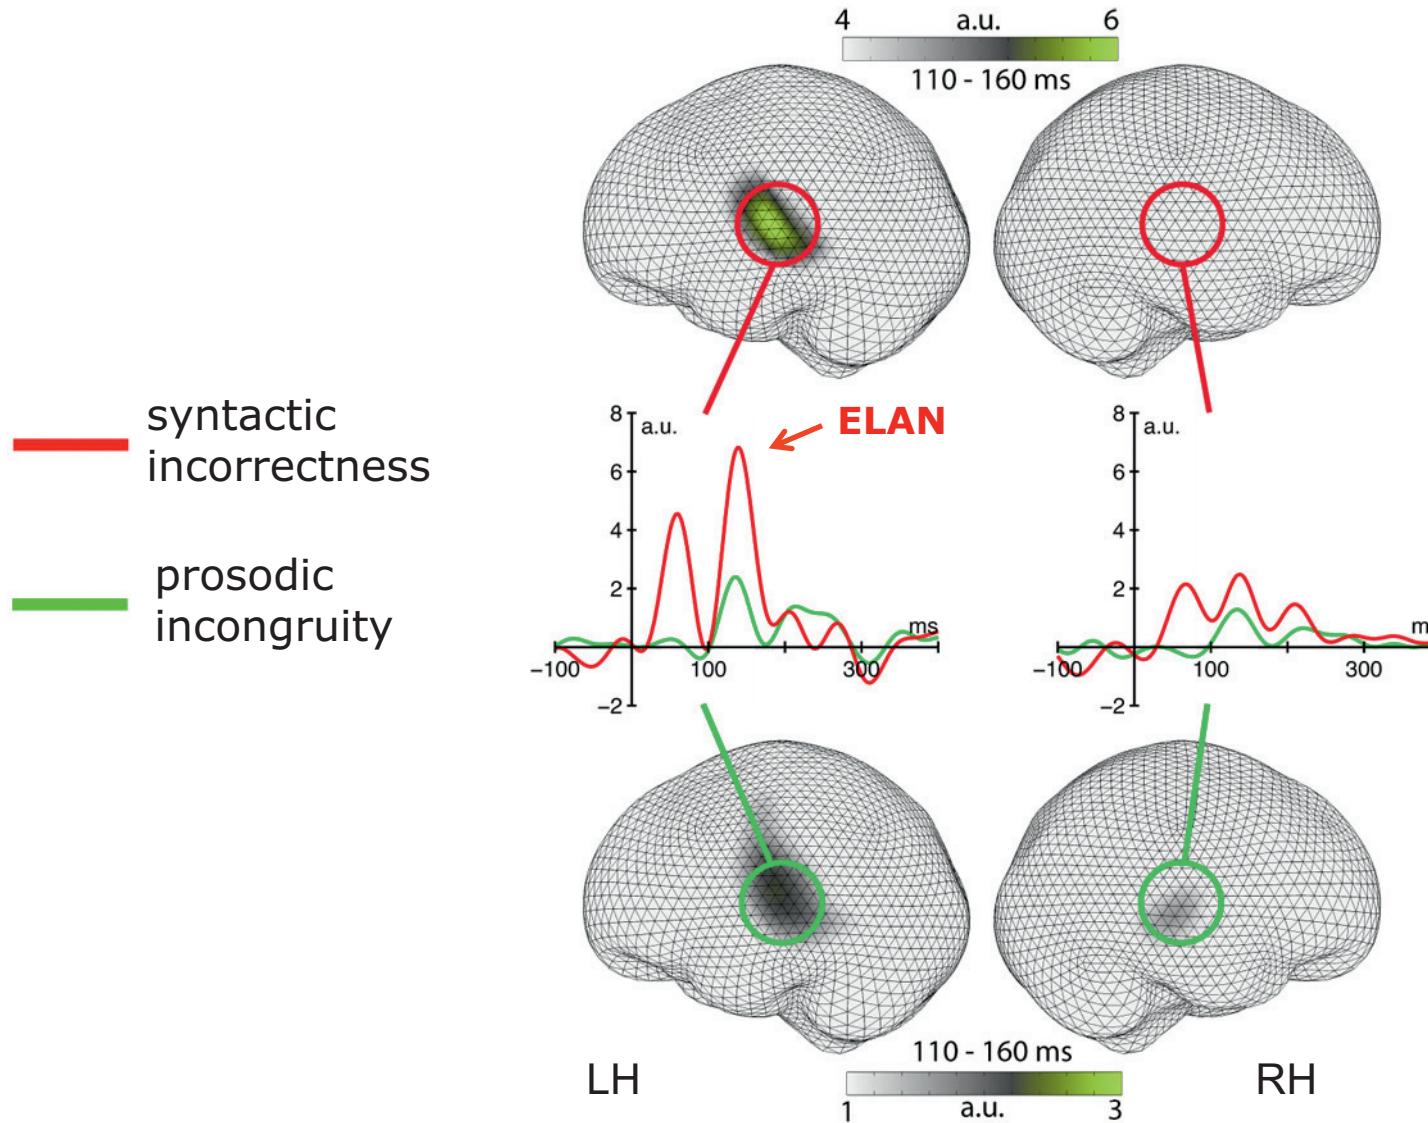

+

~

Source: Herrmann, Maess, Hahne, Schröger & Friederici, NeuroImage, 2011

MEG experiment

Source: Herrmann, Maess, Friederici, *Neuroscience Letters*, 2011

Conclusion

**ELAN is not due to prosodic incongruity, but
to syntactic incorrectness.**

Discussion in the literature: ELAN

Visual experiment by Dikker et al. (2009)

correct: The discovery was reported

incorrect: The discovery was in the reported

Visual presentation → ELAN located in the visual cortex

More general claim → ELAN is generated in the sensory cortex

Is the ELAN located in the auditory cortex?

ELAN and the auditory cortex

2 × 2 design (phrase structure violation × spatial location (interaural time difference by 0.2 ms))

Sentence, e.g.:

Syntax
Congruity

Spatial
Lateralization

■ Das Obst wurde geerntet. <i>The fruit was harvested.</i>	correct +	standard +
■ Die Gerste wurde im geerntet. <i>The barley was in-the harvested.</i>	incorrect -	standard +
■ Das Obst wurde geerntet. <i>The fruit was harvested.</i>	correct +	deviant -
■ Die Gerste wurde im geerntet. <i>The barley was in-the harvested.</i>	incorrect -	deviant -

local syntax

auditory

ELAN is not located in the auditory cortex, but in the left aSTG and the FOP.

Neuroanatomy of syntactic processes

local syntax

Broca's area

What is the function of
Broca's area?

The function of Broca's area: Patient evidence

Studies with patients suffering from lesions in Broca's area have syntactic deficits:

- a) They produce agrammatic sentences.
- b) They have problems in comprehending syntactically complex sentences.

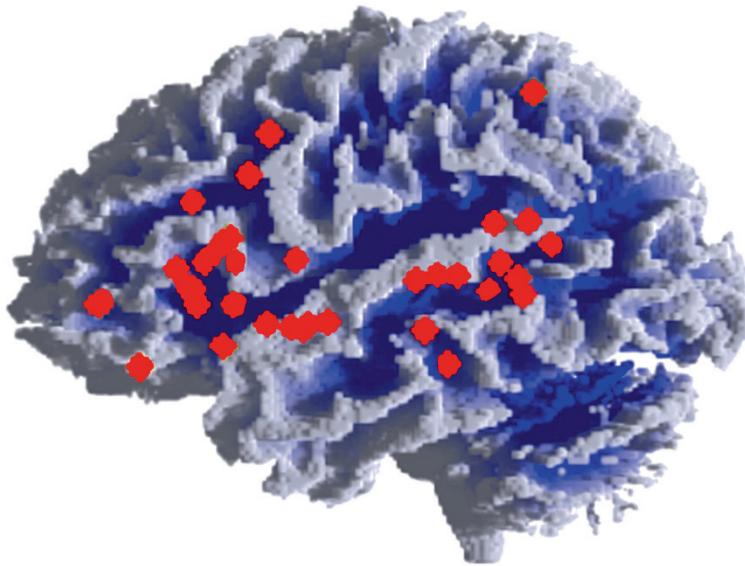

Hypothesis:

Syntax is located in Broca's area.

(see also Grodzinsky, 2000)

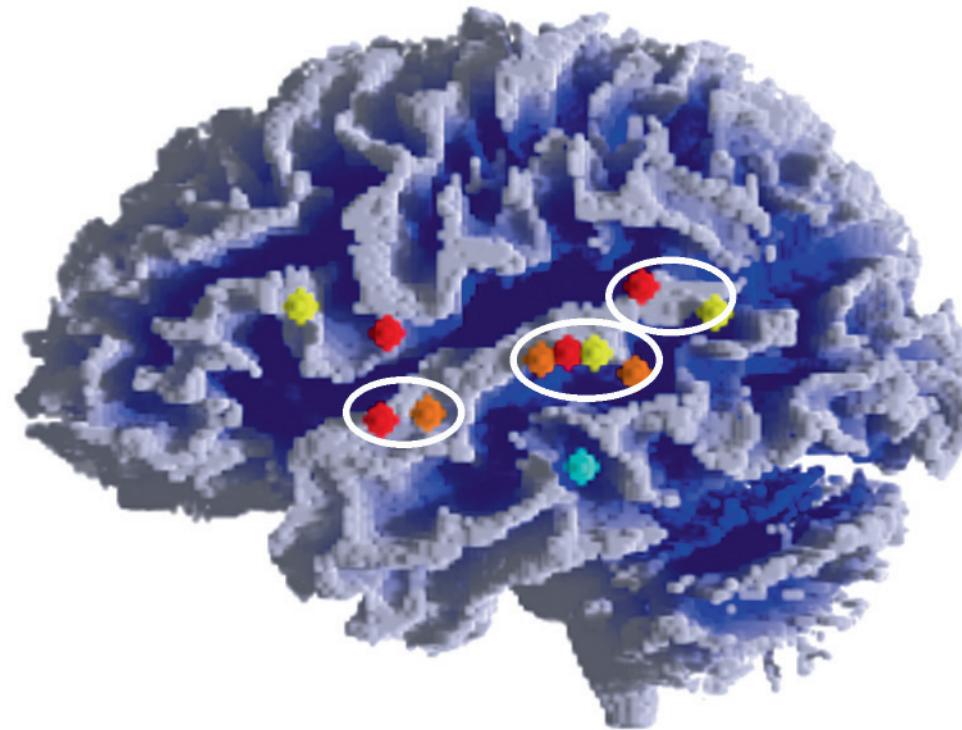

The function of Broca's area: fMRI evidence

A metaanalysis of 15 studies on syntactic processing was conducted.

Metaanalysis A

Syntactic violations: Ungrammatical > grammatical

Parametric manipulation of syntactic complexity I: Non-canonical sentences

canonical (S-IO-DO)

Heute hat der Opa dem Jungen den Lutscher geschenkt.

Today has the grandfather(nominative) the boy (dative) the lollipop(accusative) given (as a present).

medium complexity (IO-S-DO)

Heute hat dem Jungen der Opa ___ den Lutscher geschenkt.

Today has the boy the grandfather the lollipop given.

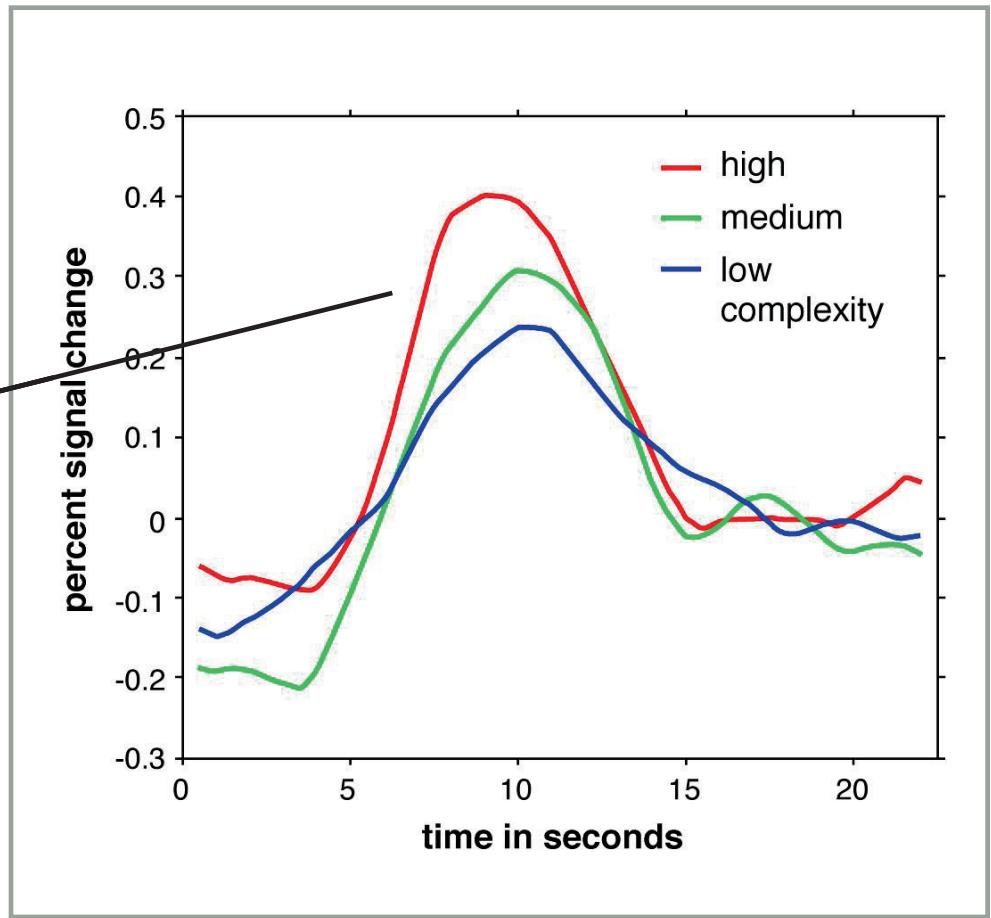

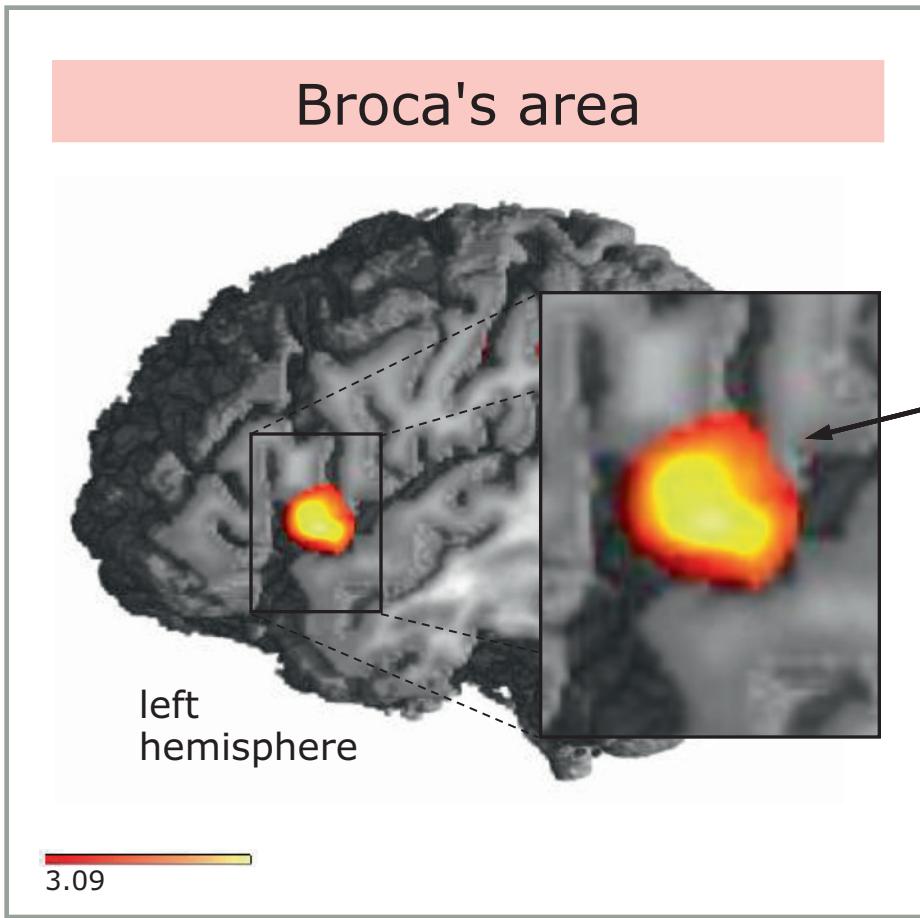

high complexity (IO-DO-S)

Heute hat dem Jungen den Lutscher der Opa ___ ___ geschenkt.

Today has the boy the lollipop the grandfather given.

S = subject noun phrase, IO = indirect object argument, DO = direct object

Result of ROI analysis Broca's area & syntactic complexity

Syntax in the human brain

left
hemisphere

Network 1

Network 2

There are two syntactic processing networks

Network 1:Local syntax

- frontal operculum (FOP)
- anterior STG.

Network 2:Complex syntax

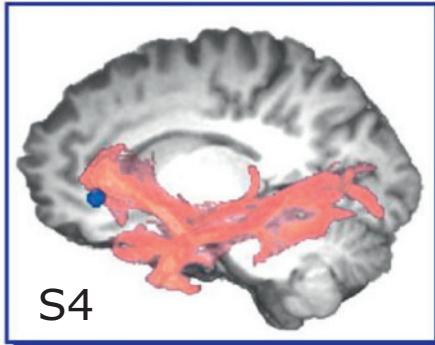

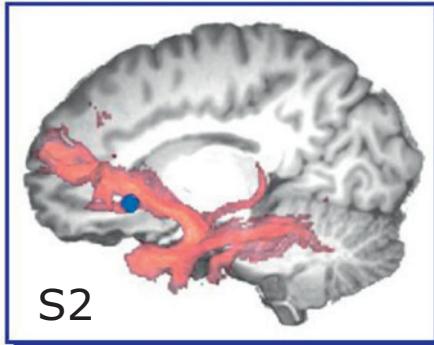

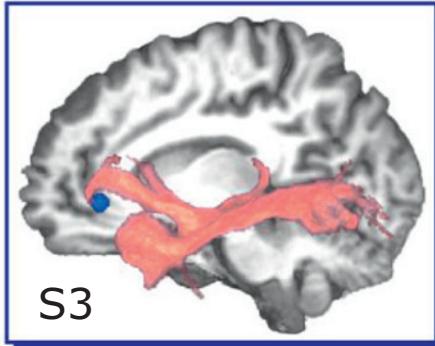

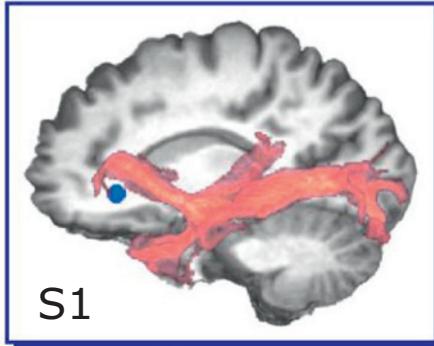

- BA 44/45 (Broca's area)
- posterior STG/STS.

Is there additional evidence for two
different neural networks?

→ structural connectivity by
means of DTI

Connectivity: Network 1

Local phrase structure processing

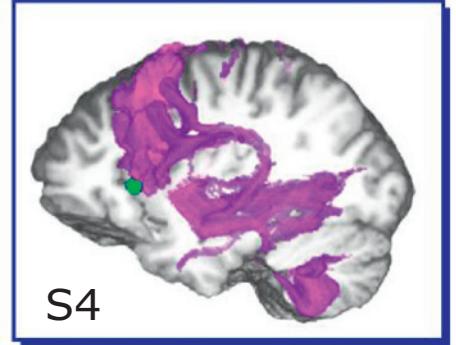

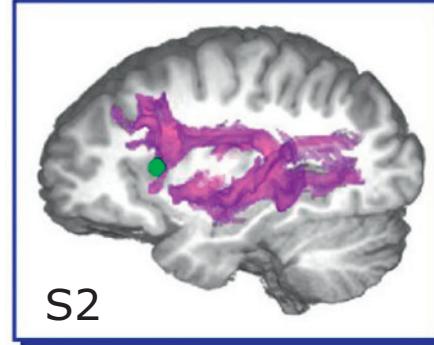

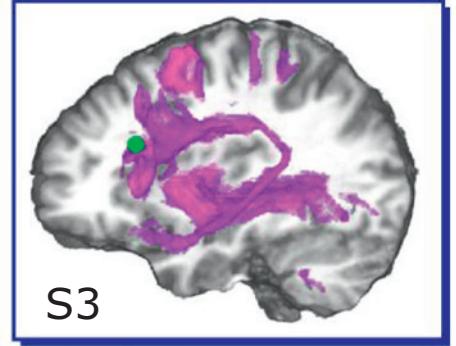

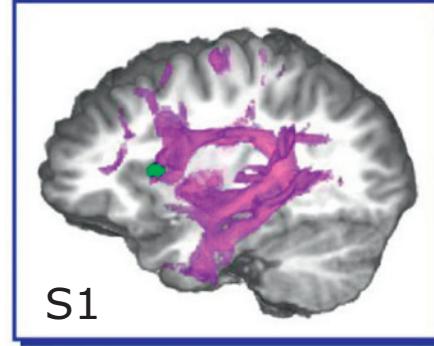

from FOP to STG

ventral pathway

Connectivity: Network 2

Processing complex hierarchy

from BA44 to STG

dorsal pathway

● ● individual maximum of activation in functional study

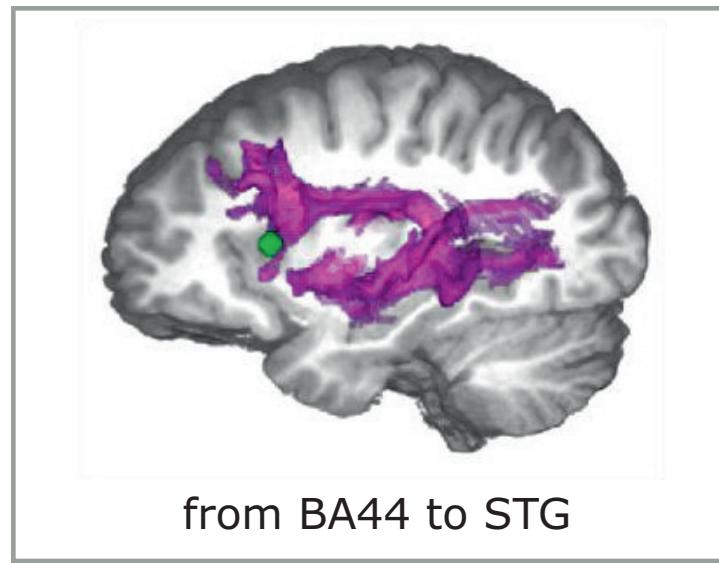

Source: Friederici, Bahlmann et al., PNAS, 2006

Lisbon, June 24, 2013

Max Planck Institute for Human Cognitive and Brain Sciences

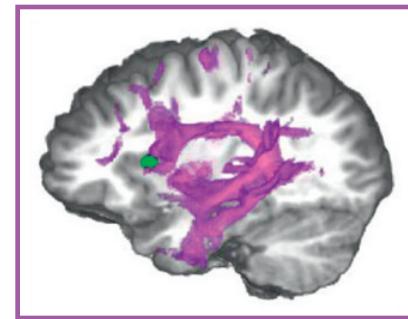

Function of the dorsal pathway: Testing the hypothesis

If the dorsal pathway is responsible for the processing of complex sentences

then this pathway should not yet be fully developed in children at an age when the processing of syntactically complex sentences is still imperfect.

Dorsal pathway & ontogeny

Processing complex sentences in children.

Behavioral evidence

canonical (SVO)

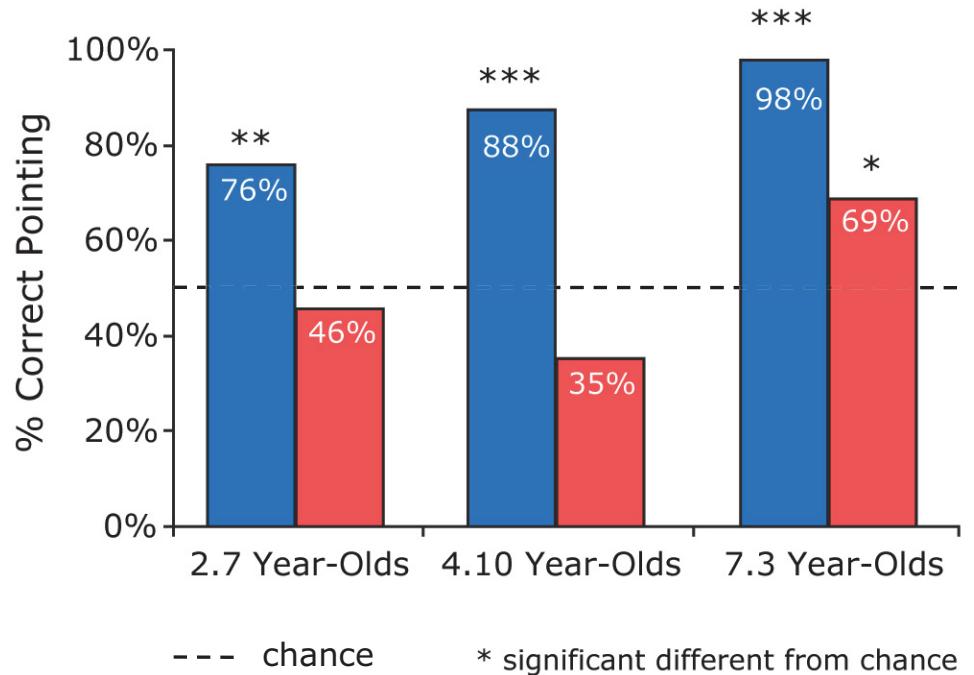

Der Hund wieft den Löwen.

[The dog]_{NOM} is weefing [the lion]_{ACC}.

non-canonical (OVS)

Den Tiger wieft der Bär.

[The tiger]_{ACC} is weefing [the bear]_{NOM}.

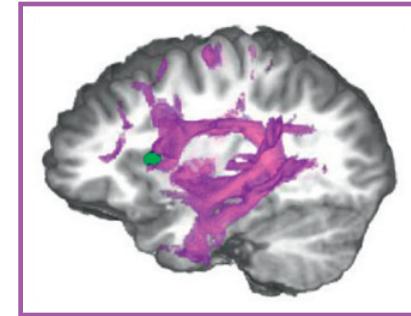

Source: Dittmar, Abbot-Smith, Lieven & Tomasello, *Child Development*, 2008

Lisbon, June 24, 2013

Max Planck Institute for Human Cognitive and Brain Sciences

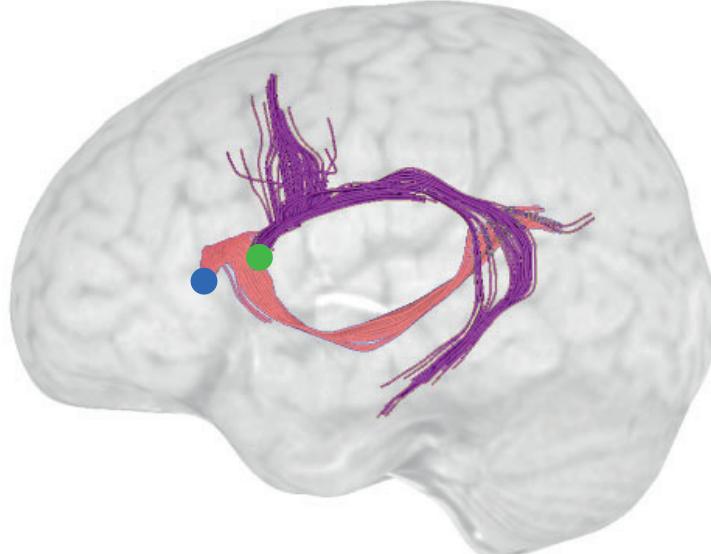

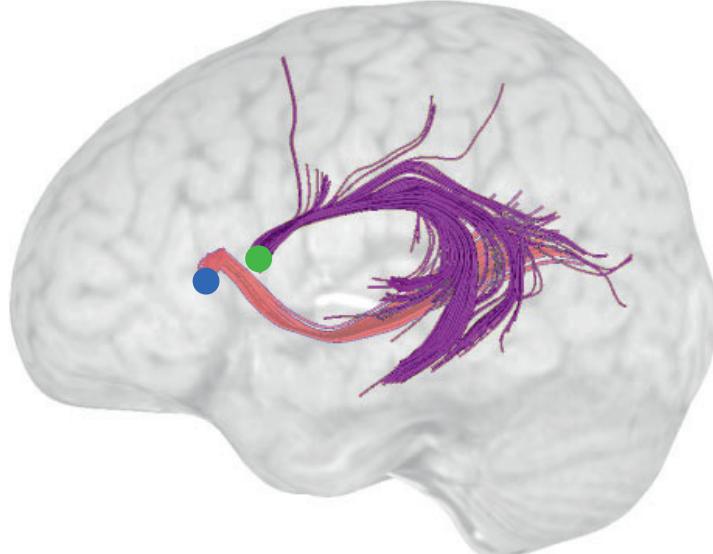

Dorsal pathway & ontogeny

The dorsal pathway is not fully developed in children who still have problems with processing complex sentences.

Adults

7-year-olds

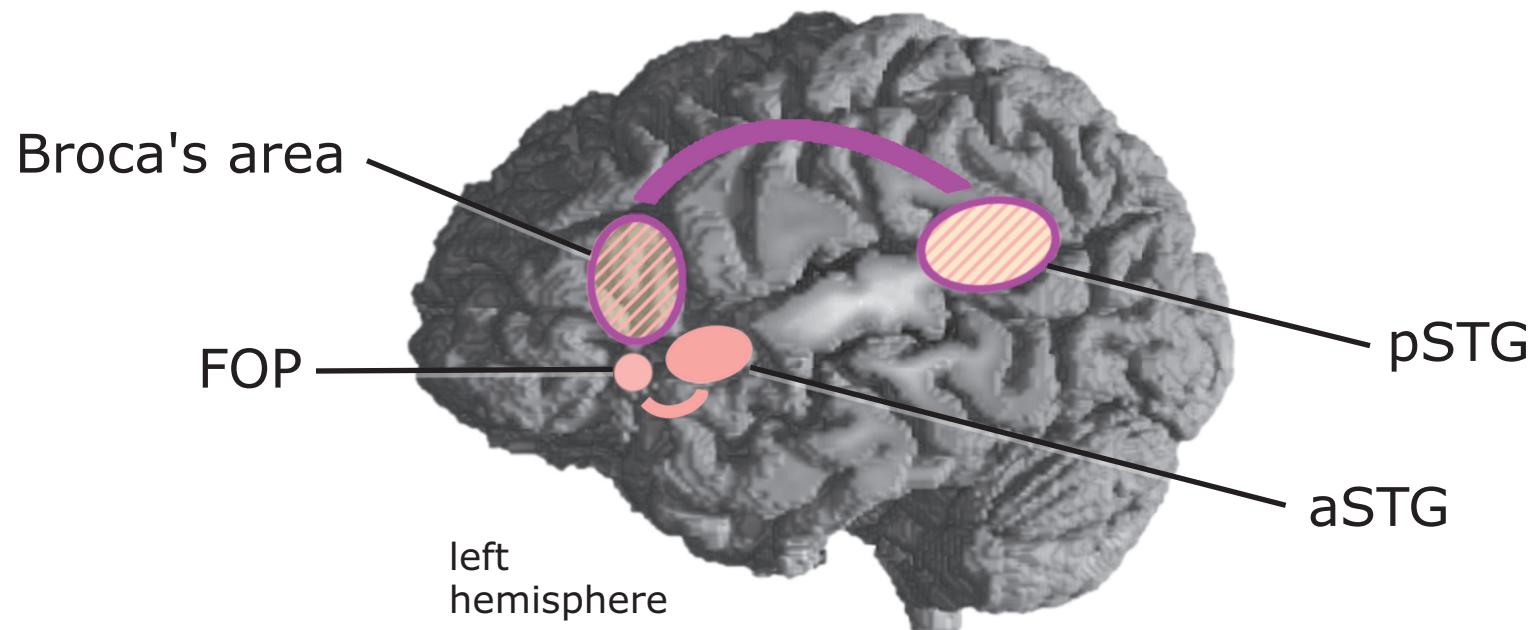

- dorsal pathway
- ventral pathway

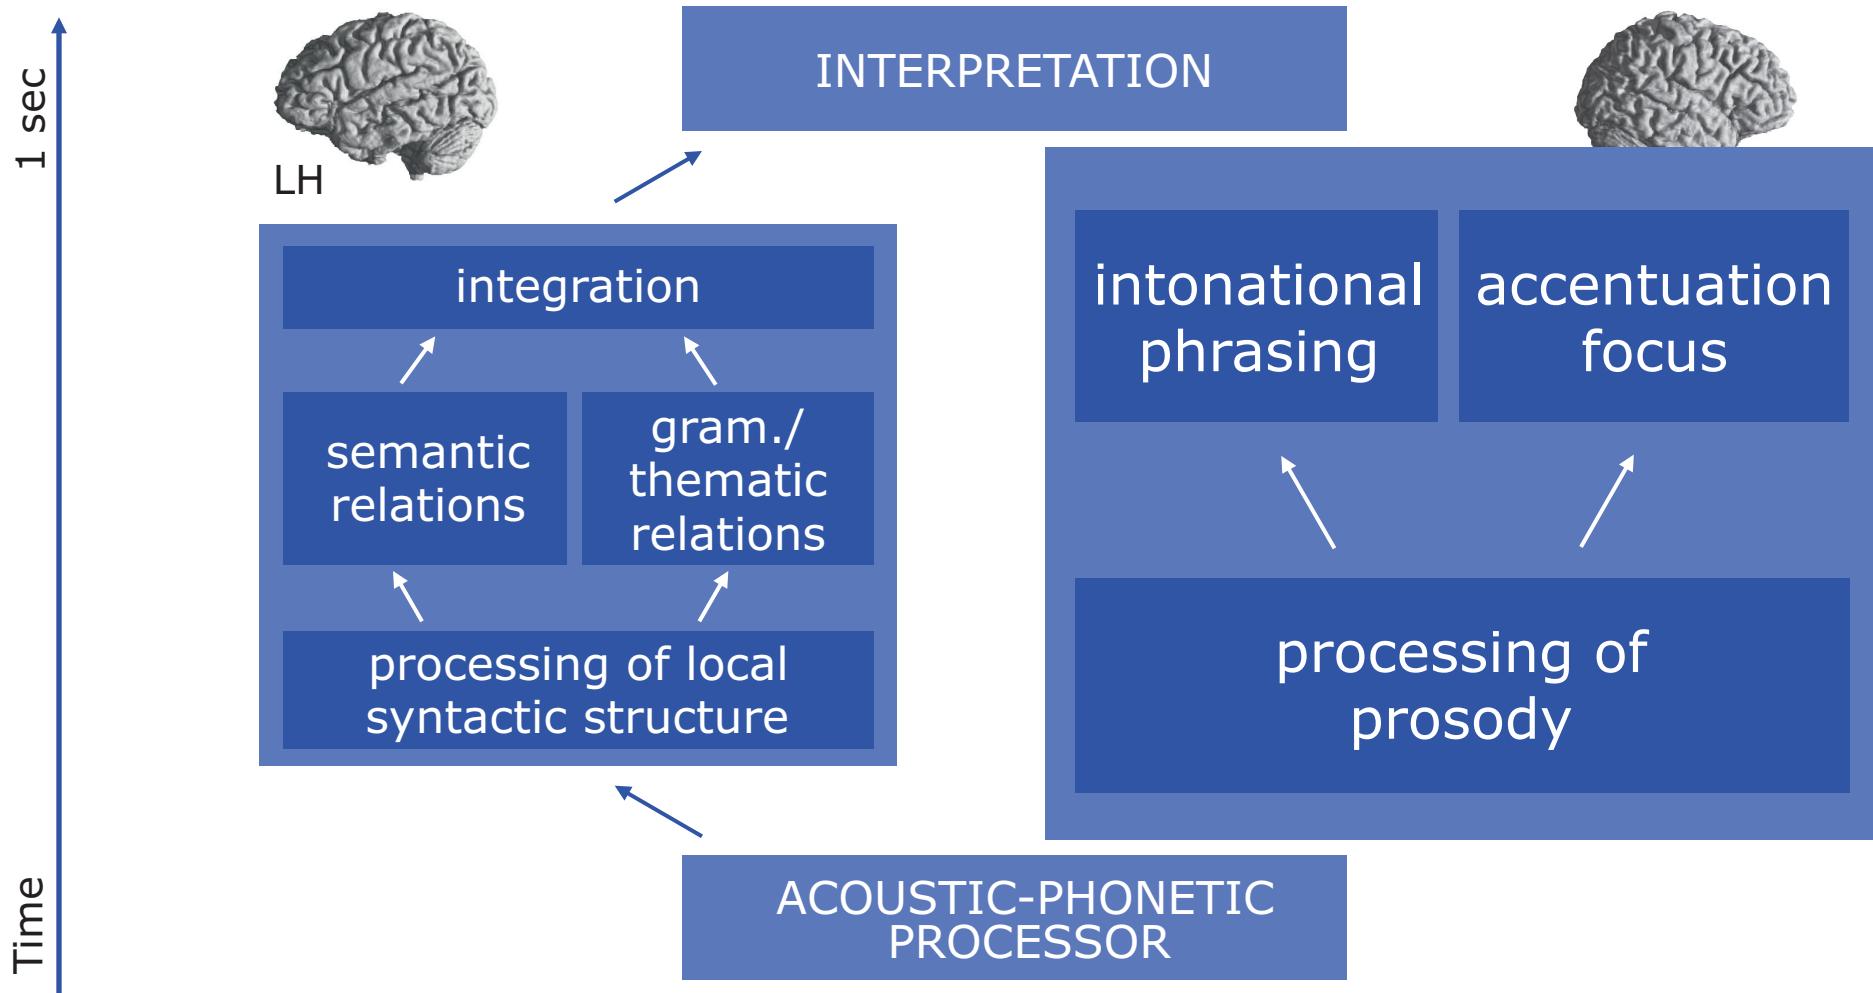

Source: Brauer, Anwander & Friederici, *Cerebral Cortex*, 2010

Conclusion: LH

There are two syntactic networks active during auditory sentence comprehension: One supporting local phrase structure building and one supporting the processing of syntactically complex sentences.

Prosodic processes

Source: Friederici & Alter, *Brain and Language*, 2004

Stimuli: Absence/presence of information type

(1) Normal speech

normal correct sentences containing SEMANTIC,
SYNTACTIC and PROSODIC information

(2) Syntactic speech

pseudo word sentences containing SYNTACTIC and
PROSODIC information, i.e., lack of semantic info

(3) Prosodic speech (delexicalized)

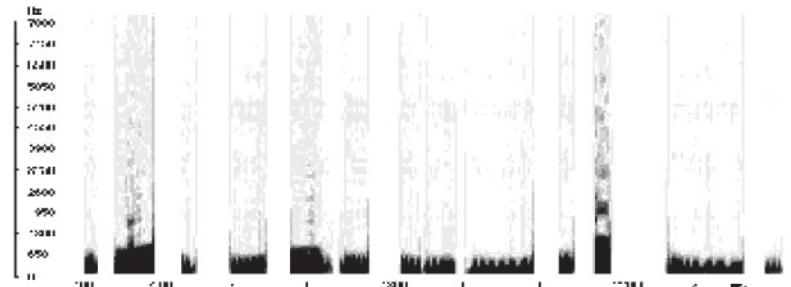

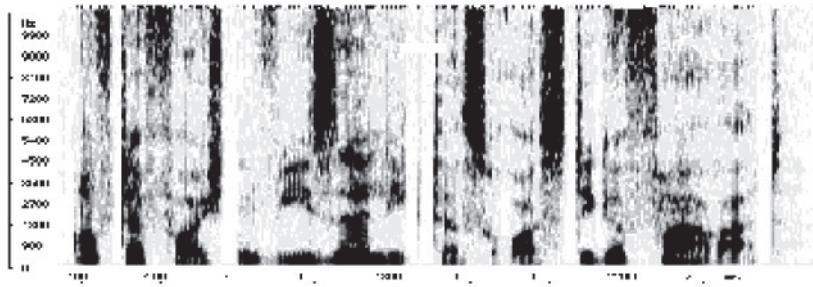

filtered sentences containing PROSODIC information
only, i.e., lack of segmental info

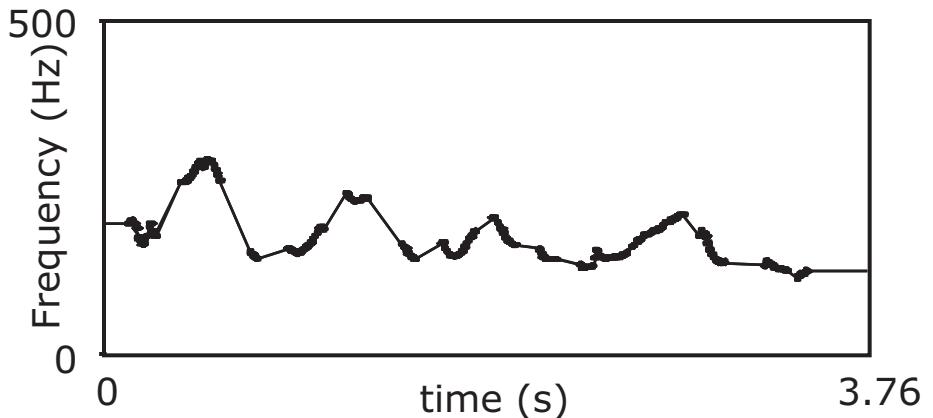

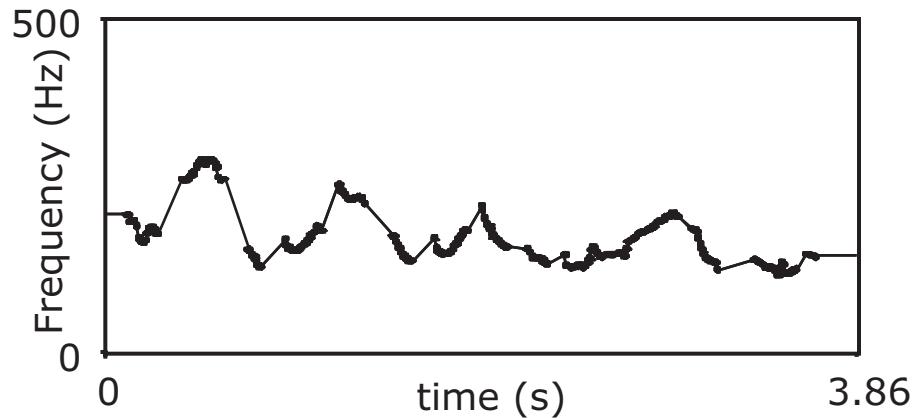

Syntactic speech

Prosodic speech

Acoustic signals of stimulus material

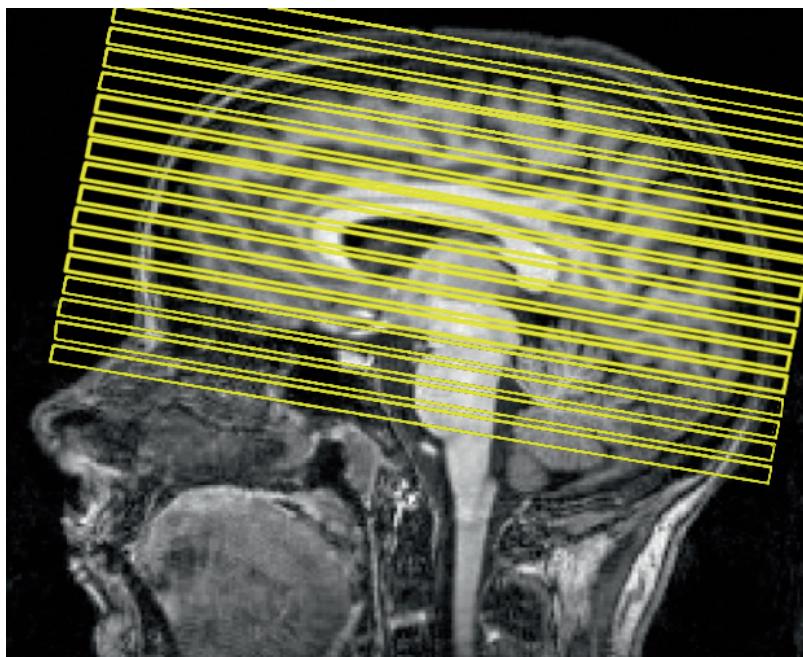

Pitch contour

Source: Meyer, Alter, Friederici, Lohmann & von Cramon, Human Brain Mapping, 2002

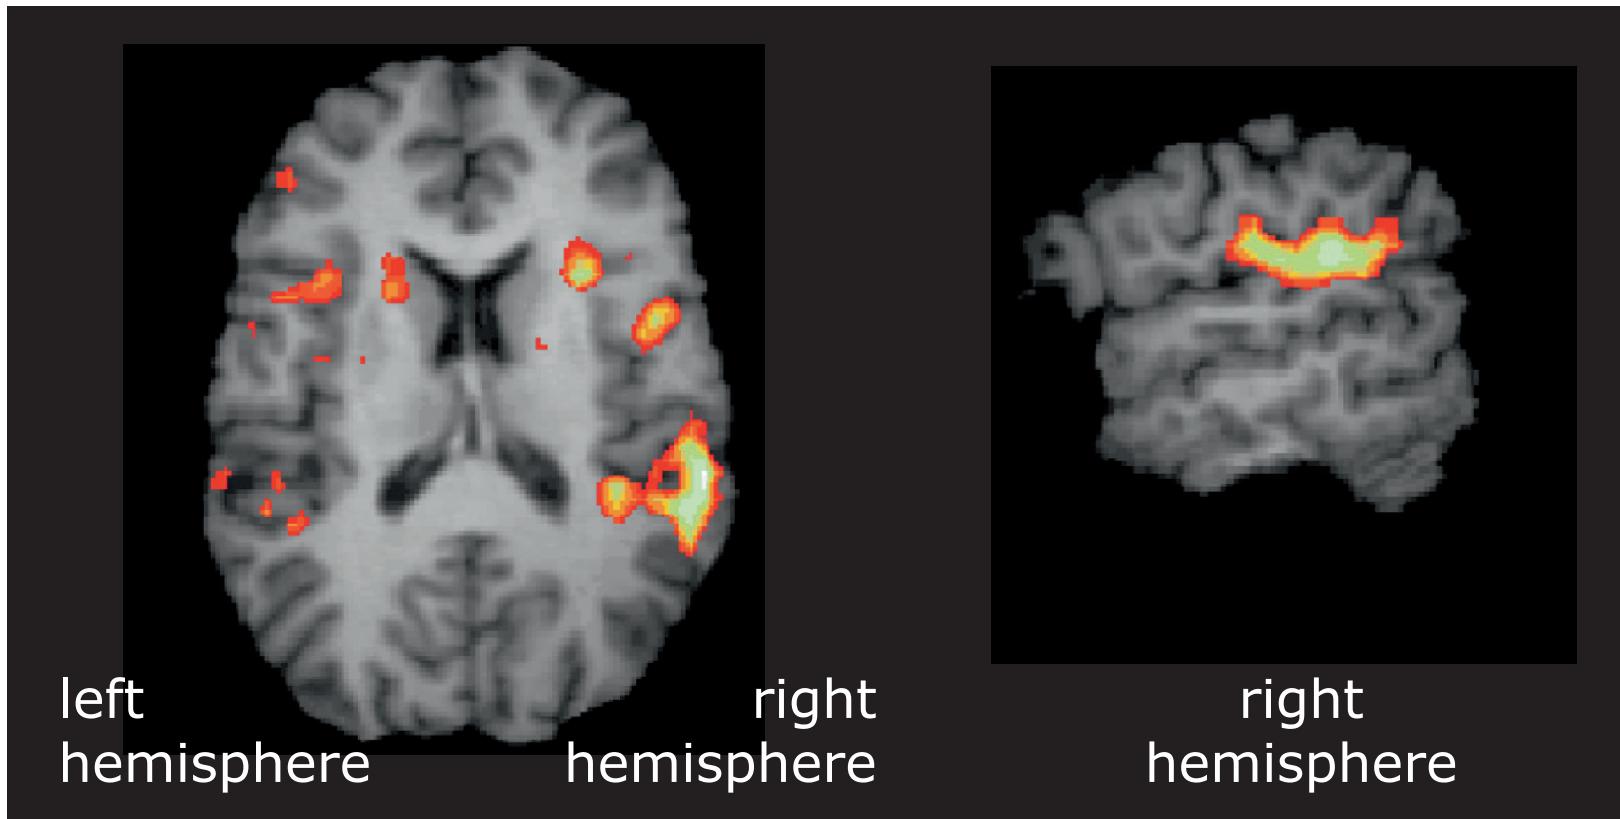

fMRI method

- **MRT:** 3 T Bruker Medspec 30/100 / 3 T Siemens Trio
Anatom. contrasts: T_1 -weighted 3D MDEFT sequence (128 sagittal slices)
Functional contrasts: T_2^* -weighted EPI sequence; TR = 2 s; TE = 40 ms
- **Slices:** horizontal slices parallel to the AC-PC line covering the perisylvian cortex; thickness = 4 mm; skip = 2 mm; 3 mm² *in-plane* and 7 mm *through-plane* resolution.

Prosodic effect

Prosodic speech vs. Syntactic speech

Left: Horizontal slice through the supratemporal plane

Right: Parasagittal view of the right hemisphere

($Z \geq 5$)

Source: Meyer, Alter, Friederici, Lohmann & von Cramon, Human Brain Mapping, 2002

Lisbon, June 24, 2013

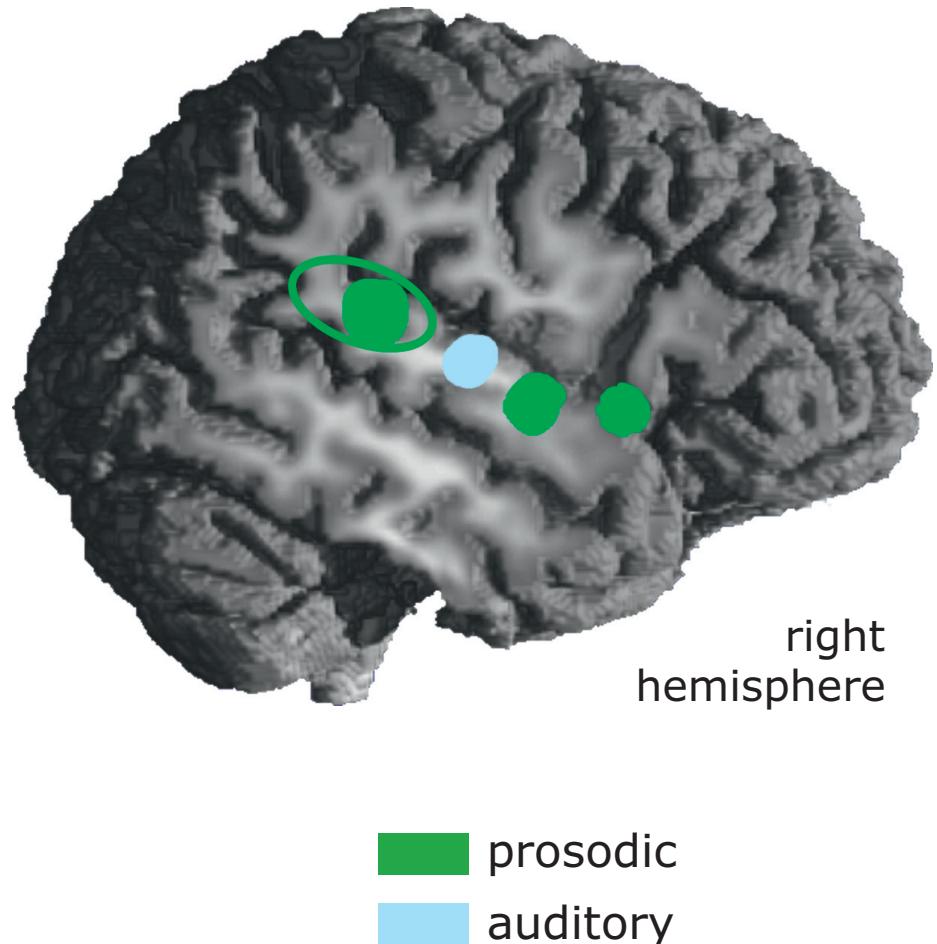

Max Planck Institute for Human Cognitive and Brain Sciences

Conclusion

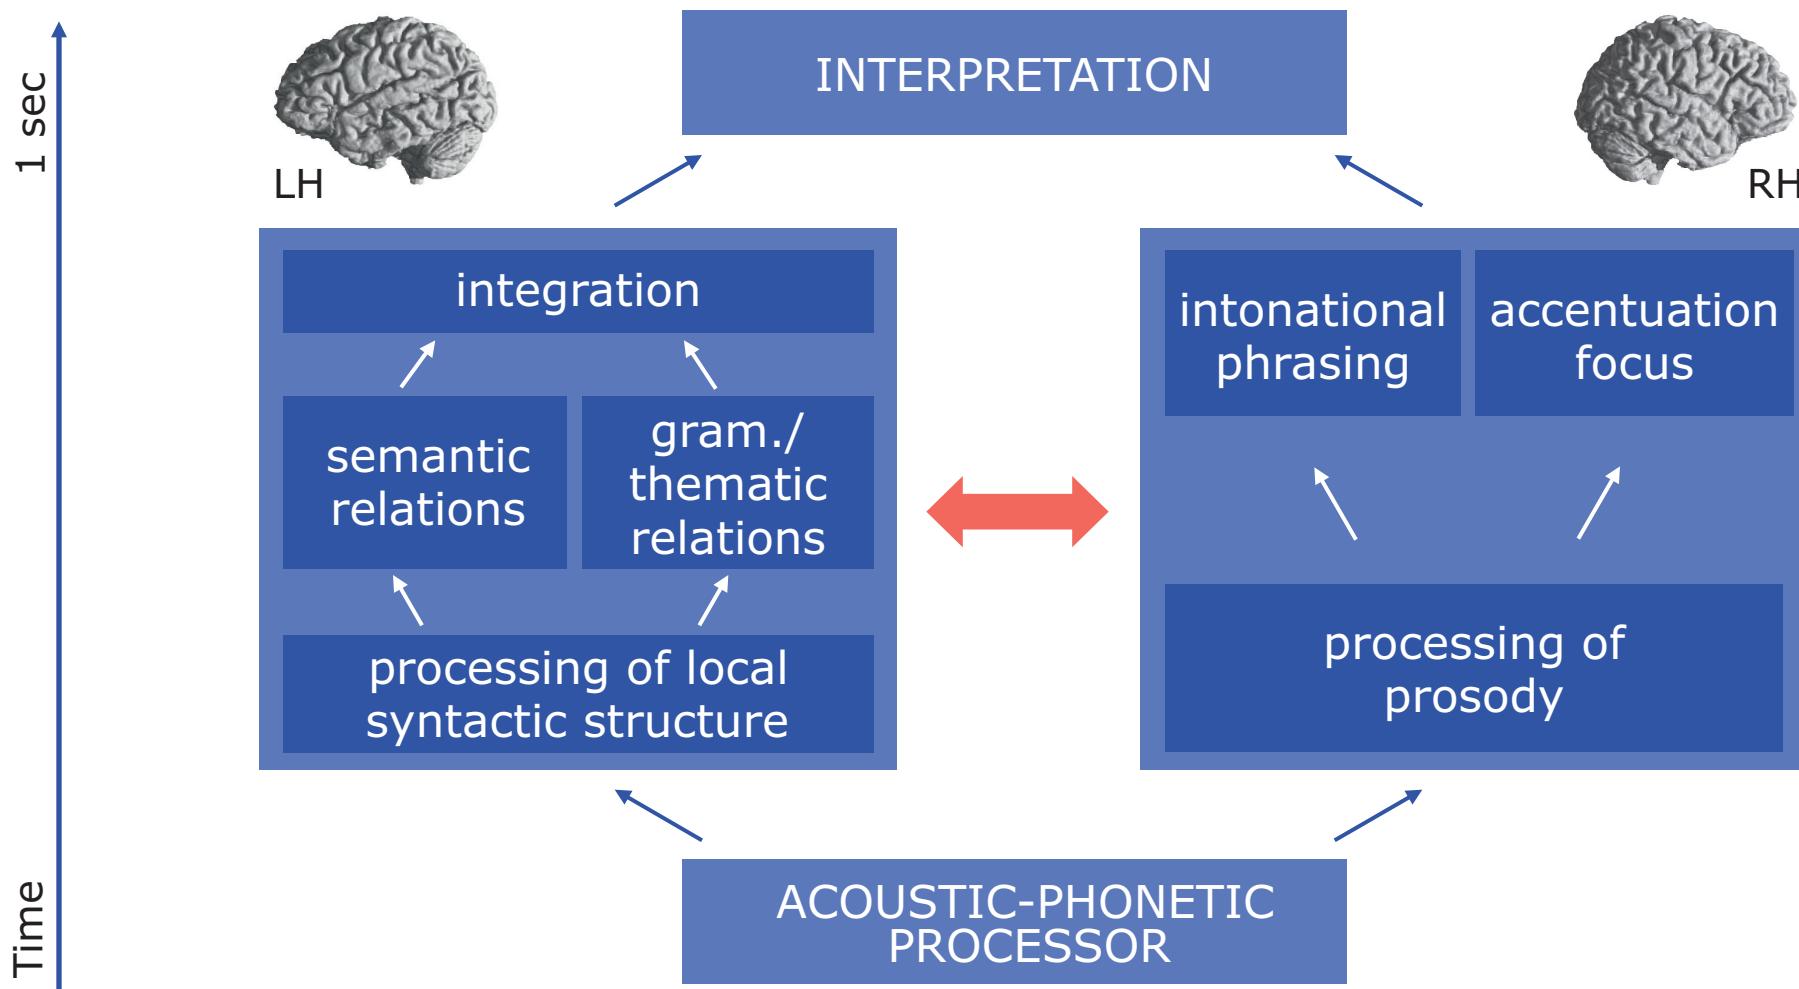

Prosodic processes

are supported in particular by

- opercular portion of the right inferior frontal gyrus
- superior temporal gyrus with dominance in the right hemisphere

Syntax-prosody interaction

Source: Friederici & Alter, *Brain and Language*, 2004

Syntax-Prosody interaction

Since John always jogs a mile
this seems like a short distance to him.

Since John always jogs a mile
seems like a short distance to him.

Syntax-Prosody interaction

[Since John always jogs a mile] #
[this seems like a short distance to him].

Since John always jogs a mile
seems like a short distance to him.

Syntax-Prosody interaction

[Since John always jogs a mile] #
[this seems like a short distance to him].

[Since John always jogs] #
[a mile seems like a short distance to him].

Syntax-Prosody interaction

(A) prosody correct: (1 IP)

[IP1 Peter verspricht Anna zu ARBEITEN] # [IP2 und ...
('Peter promises' Anna to work and ...

(B) prosody correct: (2 IP)

[IP1 Peter verspricht] # [IP2 ANNA zu entlasten] # [IP3 und ...
('Peter promises' to support Anna and ...

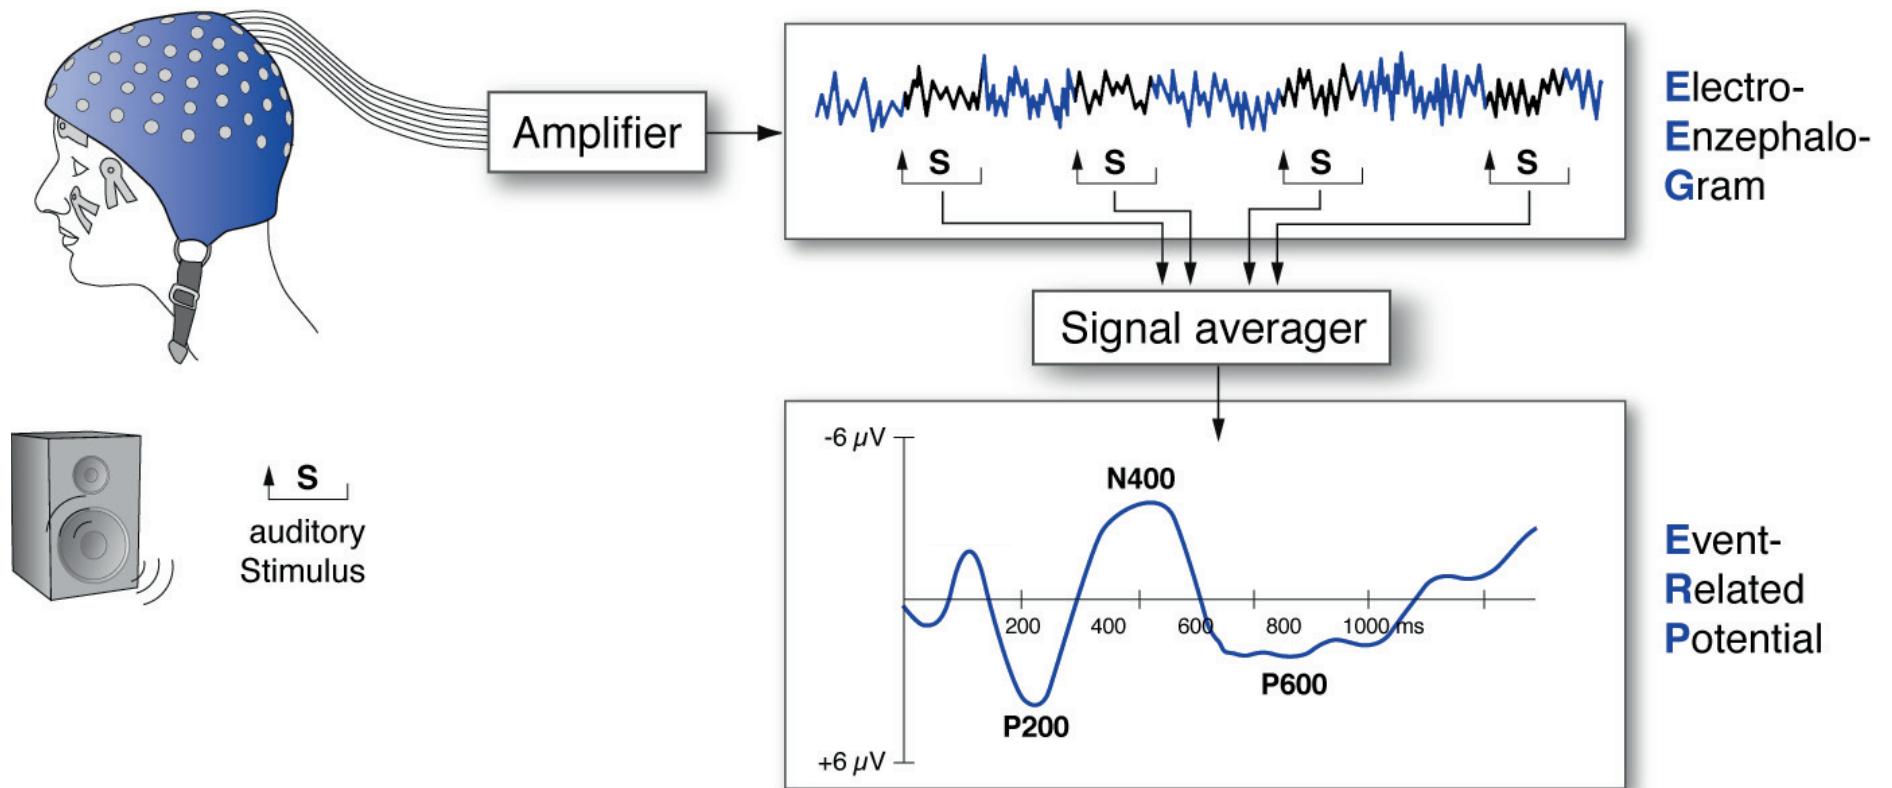

→ Cross - Splicing:

(C) prosody mismatch

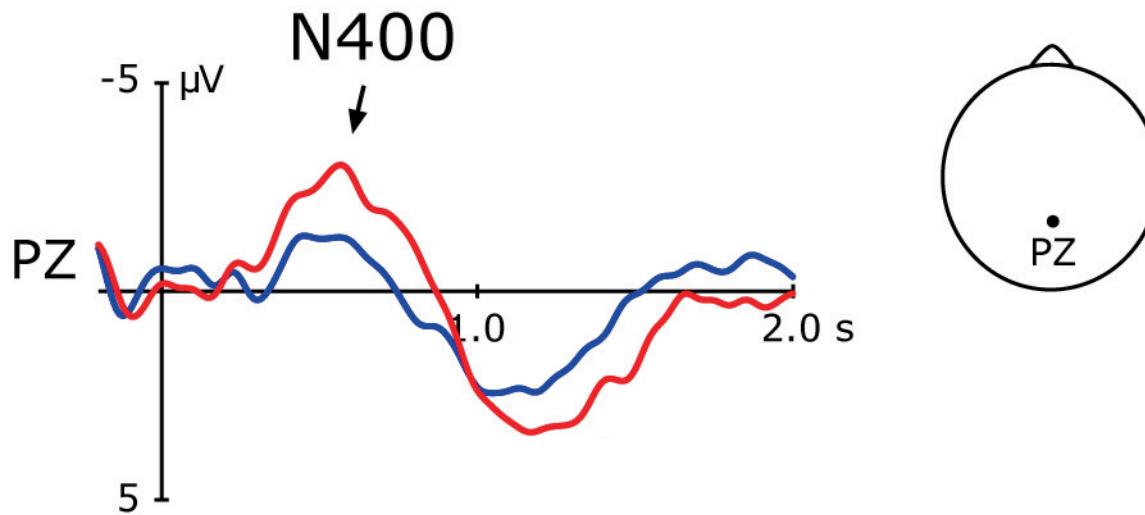

*[IP1 Peter verspricht] # [IP2 ANNA zu ARBEITEN] # [IP3 und ...
*('Peter promises' to work Anna and ...

If prosodic information influences syntactic processing, we expect an effect at the critical verb (color coded in yellow).

ERP method is used to identify the prosody mismatch effect

Prosody mismatch effect: Critical verb

prosody correct:

[Peter verspricht] # [Anna zu entlasten] # [und ...]

prosody mismatch:

*[Peter verspricht] # [Anna zu arbeiten] # [und ...]

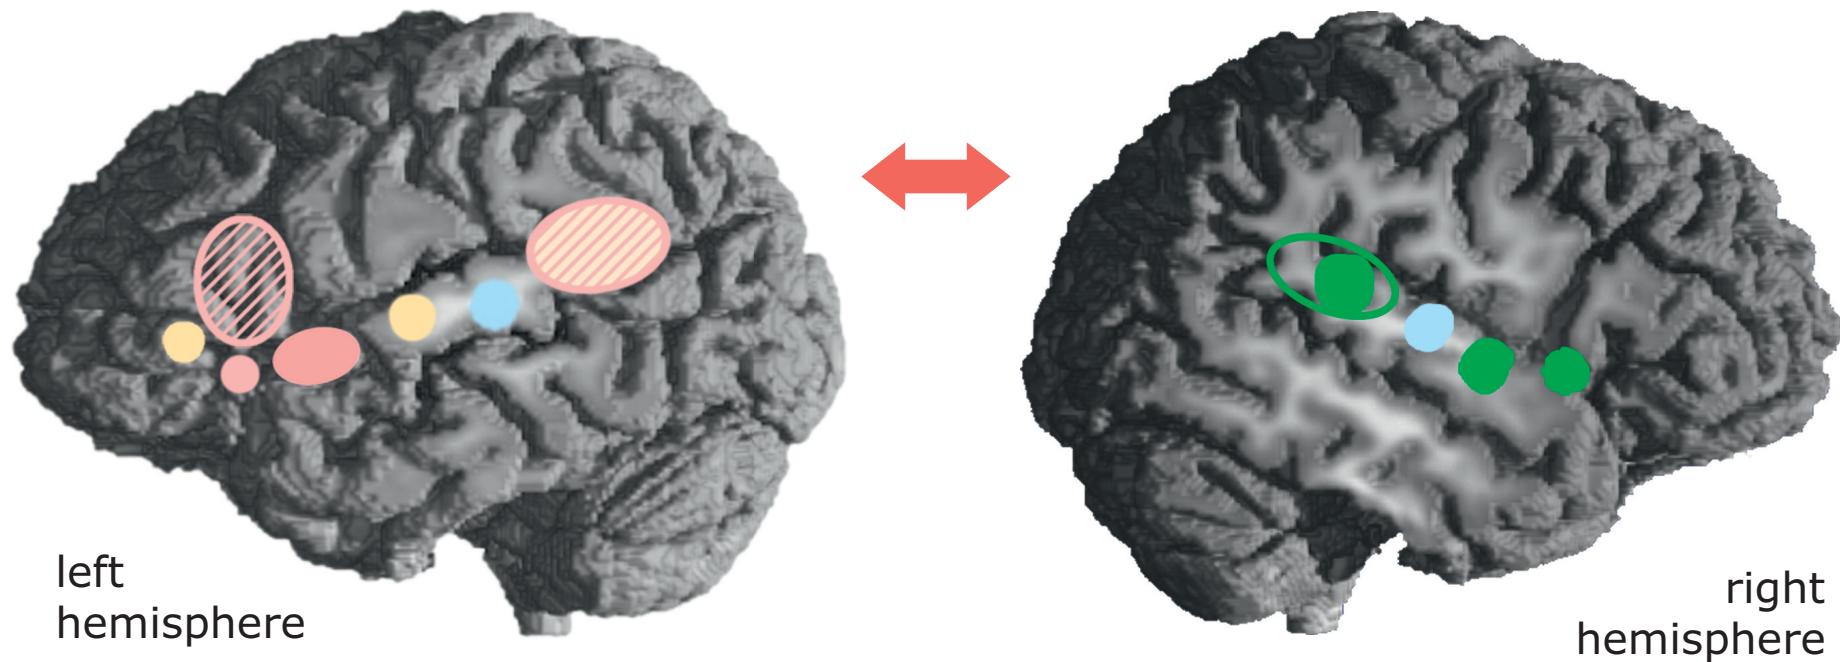

Source: Steinhauer, Alter & Friederici, *Nature Neuroscience*, 1999

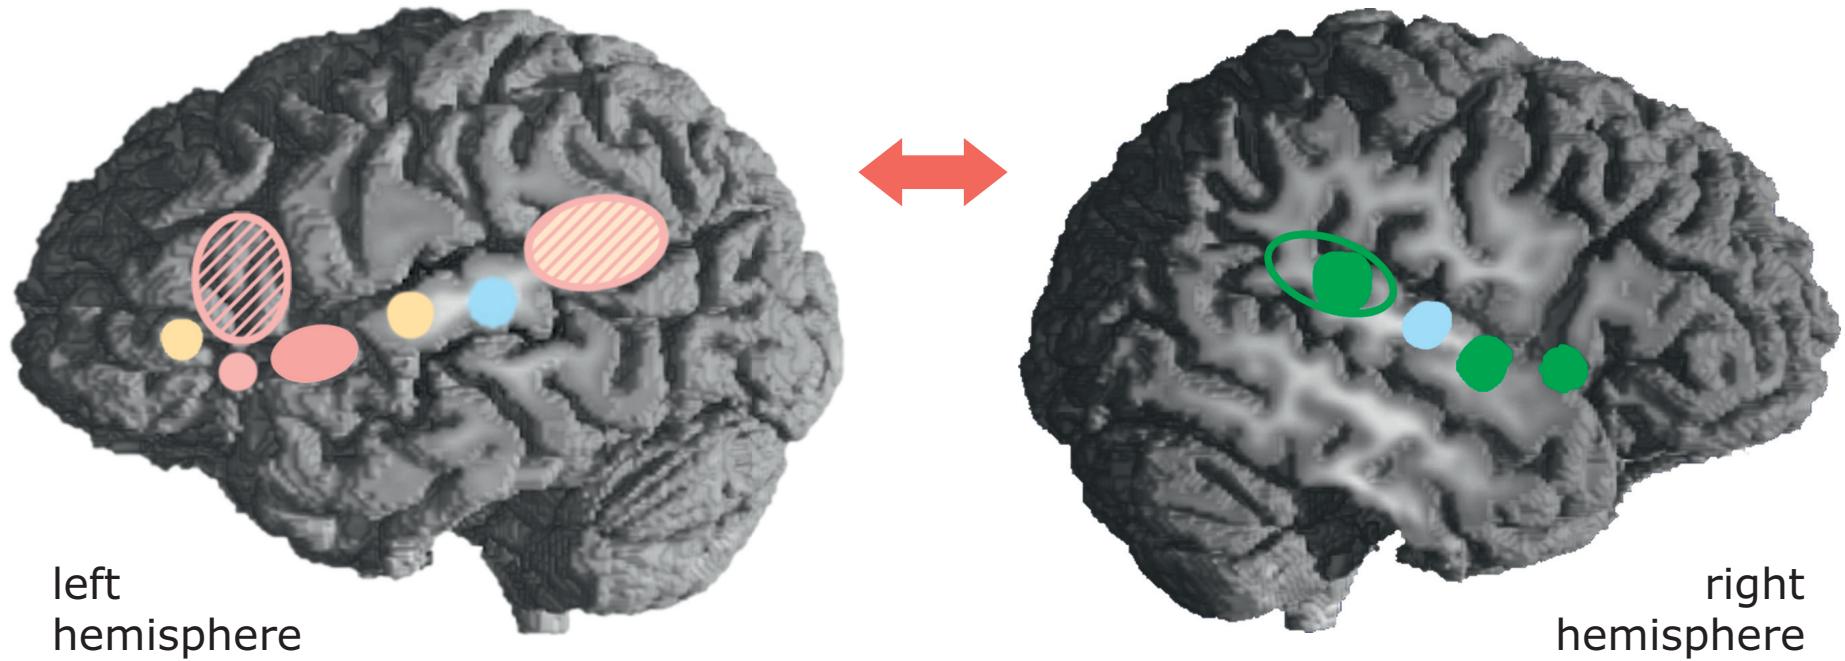

Lisbon, June 24, 2013

Max Planck Institute for Human Cognitive and Brain Sciences

Conclusion

Syntactic and prosodic information do interact.

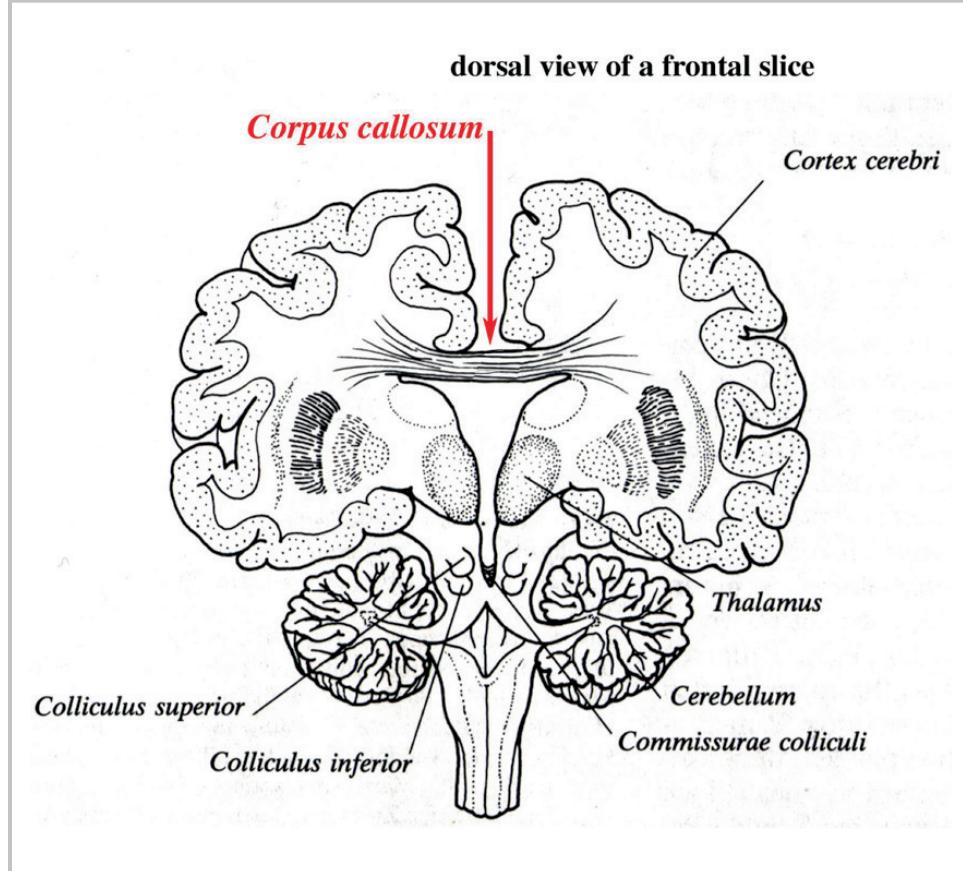

Hypothesis:

Interhemispheric processes may be responsible for the interaction between syntactic and prosodic information.

The Corpus Callosum

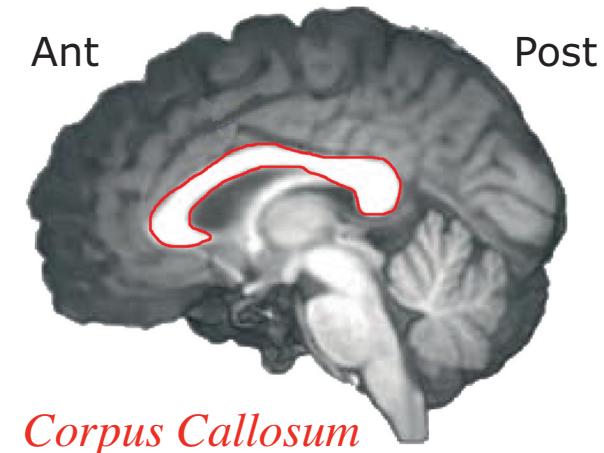

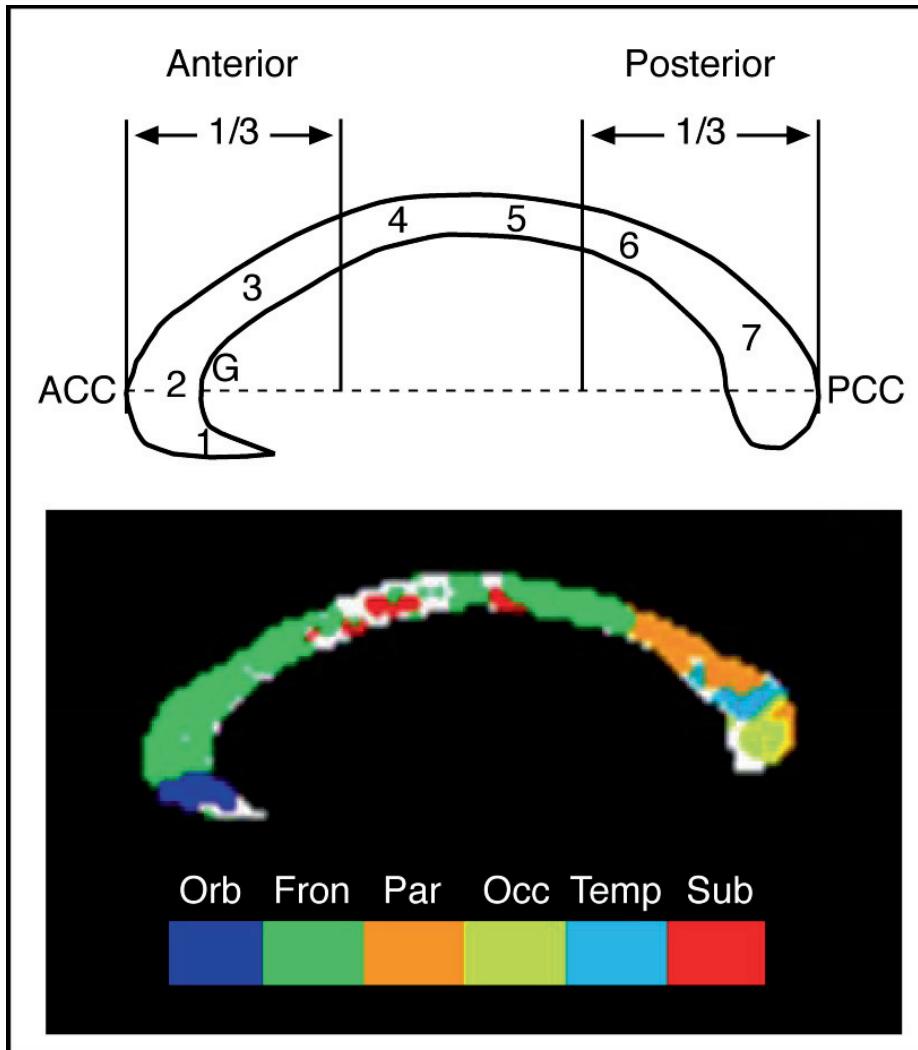

The prediction

If a prosodic mismatch effect at the verb in normal listeners is due to the interaction between LH and RH

→ such an effect should not be observable for patients with lesions in the corpus callosum (CC)

Corpus Callosum and Fiber Projections

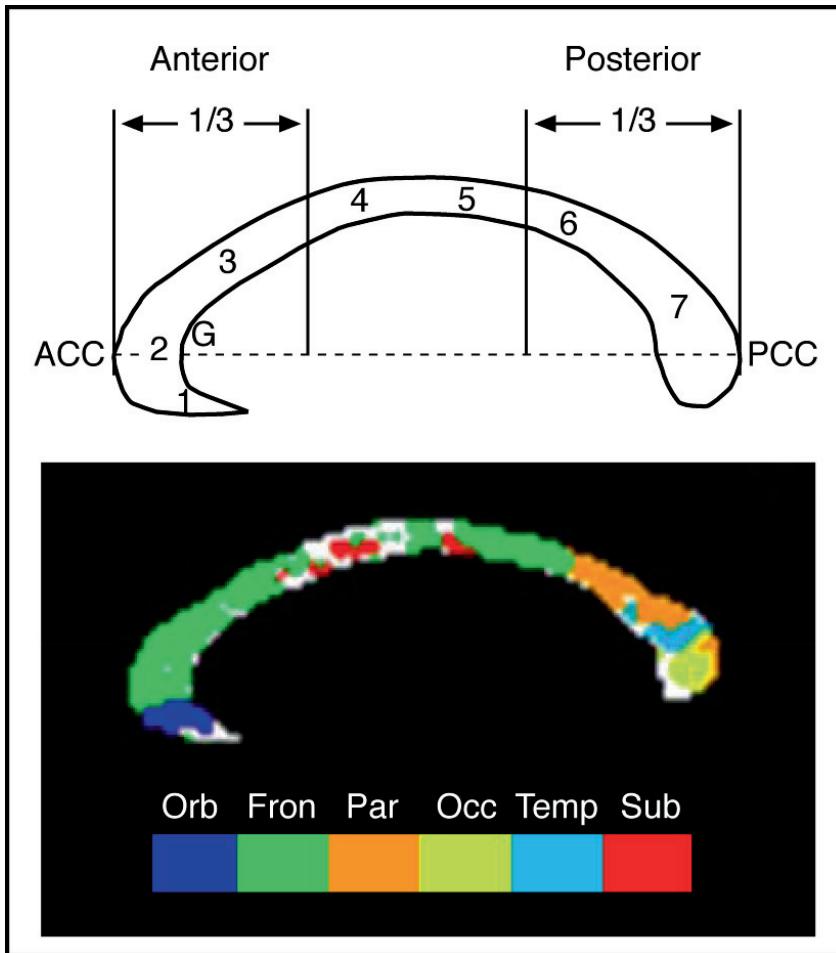

Fibers projecting
from one hemisphere
to the other

*Adapted from: Huang et al.,
NeuroImage 26, 2005*

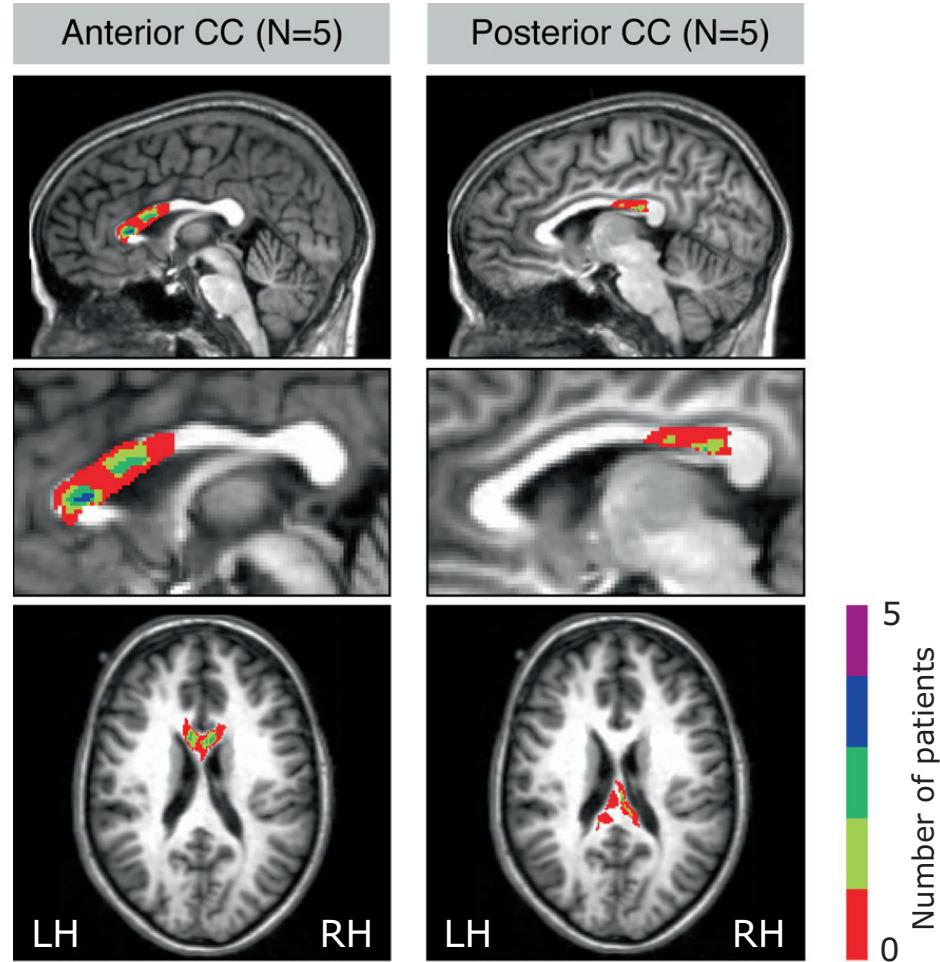

Corpus Callosum and Fiber Projections

Fibers projecting between hemispheres

Adapted from: Huang et al., NeuroImage, 2005

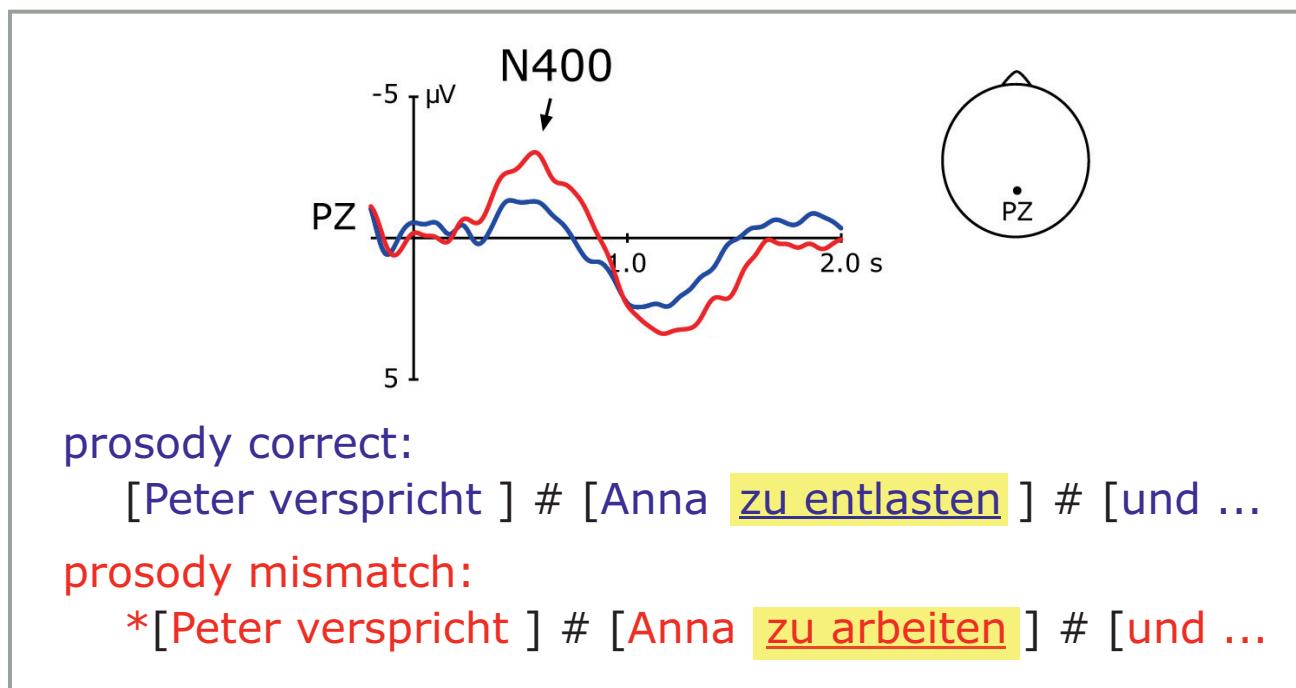

Patients and their lesions in the Corpus Callosum

Source: Friederici, von Cramon, & Kotz, Neuron, 2007

Prediction

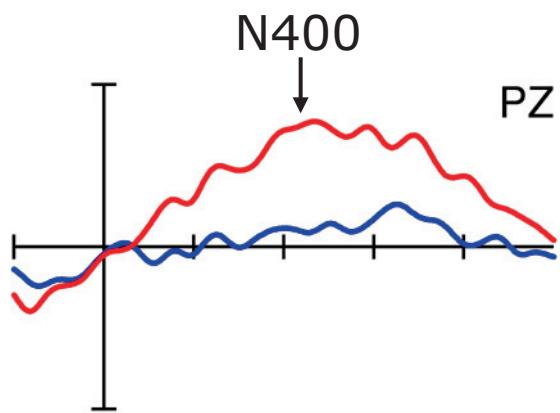

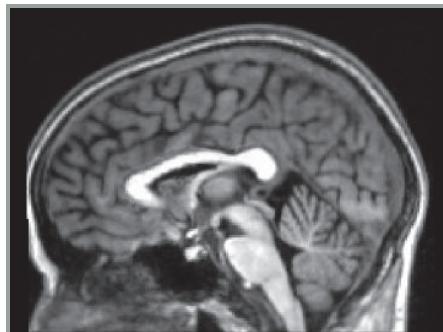

If a prosodic mismatch effect at the verb in normal listeners is due to the interaction between LH and RH

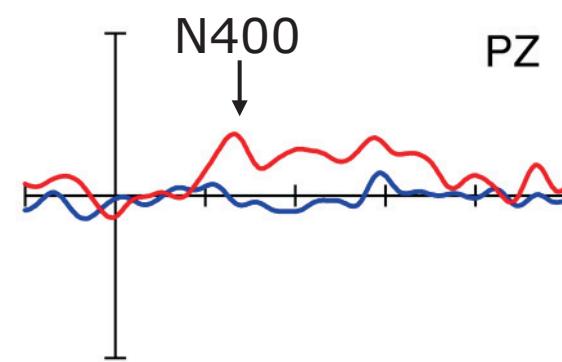

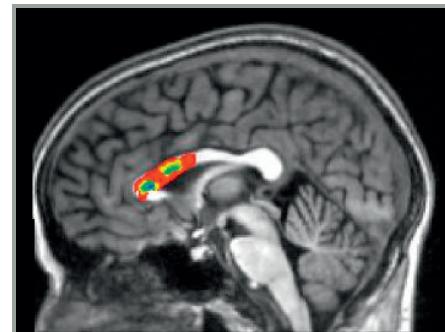

→ the prosodic mismatch effect should not be observable for CC patients

Prosody mismatch effect: Critical verb

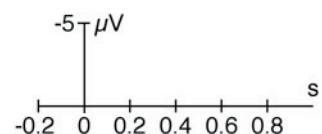

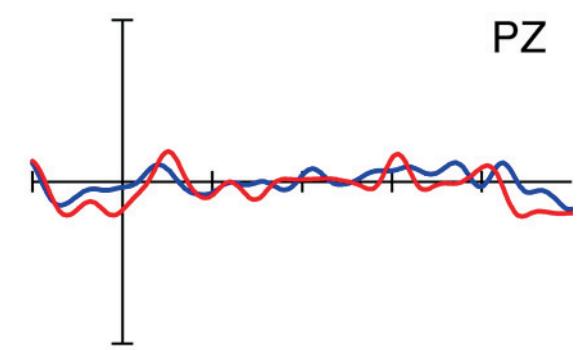

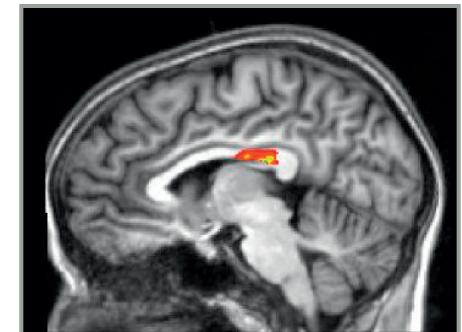

Controls

Anterior CC

Posterior CC

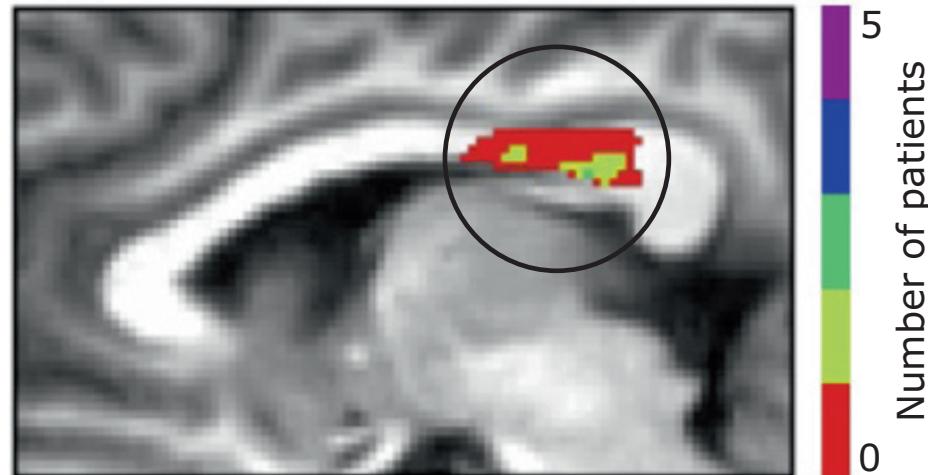

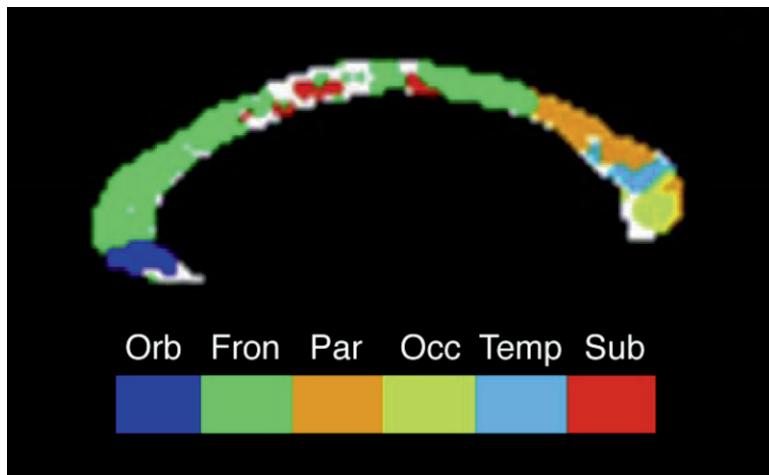

— pros correct
— pros incorrect

Source: Friederici, Kotz & von Cramon, *Neuron*, 2007

Conclusion: CC

The CC plays a crucial role in the interaction of syntactic and prosodic information.

But before this conclusion can be drawn, it must be demonstrated that the posterior CC patients do show an N400 in principle, i.e. when not dependent on prosodic information.
